

UNIVERSITÄT ZU LÜBECK

Module Guide for the Study Path

Master Medical Informatics 2014

1st and 2nd semester

Imaging Systems and Inverse Problems (CS4512-KP12, CS4512, BildgebSys)	1
Clinical Medicine (MZ4400-KP08, MZ4400, KM)	2

1st or 2nd semester

Human-Computer-Interaction (CS3010-KP04, CS3010, MCI)	4
Parallel Computing (CS3051-KP04, CS3051, ParallelVa)	6
System Architectures for Multimedia (CS3115-KP04, CS5156-KP04, CS5156, SysArchMM)	8
Programming for Medical Image Processing in C++ (CS3830-KP04, CS3830, PmBV)	10
Algorithmics (CS4000-KP06, CS4000SJ14, ALG14)	12
Specification and Modelling (CS4020-KP06, CS4020SJ14, SpezMod14)	14
Information Systems (CS4130-KP06, CS4130, InfoSys)	16
Model Checking (CS4138-KP06, CS4138SJ14, ModelChe14)	18
Runtime Verification and Testing (CS4139-KP06, CS4139, RVTesten)	19
Mobile and Distributed Databases (CS4140-KP04, CS4140, MVDB)	21
Distributed Systems (CS4150-KP06, CS4150SJ14, VertSys14)	23
Architectures for Distributed Applications (CS4151-KP04, CS4151, SVA)	25
Real-Time Systems (CS4160-KP06, CS4160SJ14, Echtzeit14)	27
Parallel Computer Systems (CS4170-KP06, CS4170SJ14, ParaRSys14)	29
Cryptographic Protocols (CS4210-KP06, CS4210, KrypProto)	31
Modeling and Analysing Security (CS4211-KP06, CS4211, SecurAna_a)	32
Pattern Recognition (CS4220-KP04, CS4220, Muster)	33
Artificial Intelligence 2 and Medical Robotics (CS4271-KP08, CS4271, KI2MedRob)	35
Image Analysis and Visualization in Diagnostics and Therapy (CS4330-KP08, CS4330SJ14, BAVIS14)	37
Health Economy (CS4340-KP04, CS4340SJ14, GOEK14)	39
Medical Data Science for Assistive Health Technologies (CS4352-KP06, MDS4AGT)	41
Medical Information Models and Ontologies - eHealth (CS4360-KP08, CS4360, MIO)	43
Semantische Datenintegration in der Medizin (CS4364, SemDatInt)	45
Medical Data Analytics (CS4366, MDA)	47
Advanced Techniques of Medical Image Processing (CS4370-KP04, CS4370, FVMB2014)	48
Advanced Techniques of Medical Image Processing (CS4371-KP08, CS4371, FVMB)	50
Medical Deep Learning (CS4374-KP06, MDL)	52
Virtual Reality in Medicine (CS4390-KP05, CS4390, VRMed)	54
Neuro-Informatics and Computer Vision (CS4410-KP08, CS4410, NeuroVisio)	56
Molecular Bioinformatics and Modelling Biological Systems (CS4441-KP08, CS4441, BioinfBioS)	57
Privacy (CS4451-KP06, Privacy)	58
Ambient Computing (CS4670-KP04, CS4670, AmbComp)	59
Foundations of Ontologies and Databases for Information Systems (CS5130-KP04, CS5130, OntoDB)	60

Web-Mining Agents (CS5131-KP08, CS5131, WebMining)	62
Semantic Web (CS5140-KP04, CS5140, SemWeb)	64
Organic Computing (CS5150-KP04, CS5150, OrganicCom)	66
Wireless Sensor Networks (CS5153-KP04, CS5153, DISensorN)	68
Advanced Internet Technologies (CS5158-KP04, CS5158, AdInternet)	70
Speech and Audio Signal Processing (CS5260-KP04, CS5260SJ14, SprachAu14)	72
Selected Topics of Signal Analysis and Enhancement (CS5275-KP04, CS5275, AMSAV)	74
Machine Learning (CS5450-KP04, CS5450, MaschLern)	76
Analysis of High-Throughput Data (CS5460-KP05, AnaHDD)	78
Legal foundations for IT (CS5820-KP04, CS5820, ITRecht)	79
Entrepreneurship & Innovation (EC4008-KP04, EI)	80
Commercial Law (EC4010-KP04, EC4010, WirtRecht)	82
Organic Chemistry (LS1600-KP04, OCKP04)	84
Molecular Biology (LS3151-KP04, LS3151, MolBioINF)	86
Biostatistics 2 (MA2600-KP04, MA2600, BioStat2)	87
Genetic Epidemiology 1 (MA3200-KP04, MA3200, GenEpi1)	89
Mathematical Methods in Image Processing (MA4500-KP04, MA4500, MatheBildv)	91
Image Registration (MA5030-KP04, MA5030, Bildregist)	93
Numerical Methods for Image Computing (MA5032-KP04, MA5032, NumerikBV)	95
Calculus of Variations and Partial Differential Equations (MA5034-KP04, MA5034, VariPDE)	97
Human Genetics (MZ4373-KP03, MZ4373, HumGen)	99
Molecular Human Genetics (MZ4374-KP03, MZ4374, MolHumGen)	101
Ethics of Sciences (PS4620-KP04, PS4620SJ14, EthikKP04)	102
Start-up and New Business (PS5830-KP04, PS5830, StartUp)	104
Social Robotics (RO5600-KP06, SocRob)	105
3rd semester	
Projektpraktikum Medizinische Informatik 1 (CS5310-KP12, PPMI1)	106
Projektpraktikum Medizinische Informatik 2 (CS5320-KP12, PPMI2)	108
Student Conference (PS5000-KP06, PS5000, ST)	110
4th semester	
Master Thesis Medical Computer Science (CS5991-KP30, CS5991, MScMI)	112
Arbitrary semester	
Module part: Computer Vision (CS4250 T, CompVisioa)	113
Seminar Advances in Medical Informatics (CS4334, AdvMI)	115

Journal Club Medical Informatics (CS4362-KP04, CS4362, JCMi)	116
Module part: NeuroInformatics (CS4405 T, NeuroInfa)	117
Module part: Molecular Bioinformatics (CS4440 T, MolBioInfa)	119
Module part: Modeling Biological Systems (MA4450 T-INF, MoBSa)	121
Module part: Inverse Problems in Imaging (ME4030 T-INF, InverPalnf)	123
Module part: Computed Tomography (ME4411 T, CT)	125
Module part: Magnetic Resonance Imaging (ME4412 T, MRT)	127
Module part: Nuclear Imaging (ME4413 T, Nukl)	129

CS4512-KP12, CS4512 - Imaging Systems and Inverse Problems (BildgebSys)		
Duration: 2 Semester	Turnus of offer: irregularly	Credit points: 12
Course of study, specific field and term: <ul style="list-style-type: none"> • Master Entrepreneurship in Digital Technologies 2020 (advanced module), technology field computer science, Arbitrary semester • Master Medical Informatics 2014 (optional subject), medical image processing, 1st and 2nd semester • Master Entrepreneurship in Digital Technologies 2014 (advanced module), technology field computer science, 2nd and/or 3rd semester • Master Computer Science 2014 (advanced module), advanced curriculum, 2nd and/or 3rd semester 		
Classes and lectures: <ul style="list-style-type: none"> • Computed Tomography (lecture, 2 SWS) • Magnetic Resonance Imaging (lecture, 2 SWS) • Nuclear Imaging (lecture, 2 SWS) • Inverse Problems in Imaging (lecture, 2 SWS) 		Workload: <ul style="list-style-type: none"> • 220 Hours private studies • 120 Hours in-classroom work • 20 Hours exam preparation
Contents of teaching: <ul style="list-style-type: none"> • see module parts 		
Qualification-goals/Competencies: <ul style="list-style-type: none"> • see module parts 		
Grading through: <ul style="list-style-type: none"> • Oral examination 		
Responsible for this module: <ul style="list-style-type: none"> • Prof. Dr. rer. nat. Thorsten Buzug 		
Teacher: <ul style="list-style-type: none"> • Institute of Medical Engineering • Prof. Dr. rer. nat. Thorsten Buzug • Prof. Dr. rer. nat. Martin Koch 		
Literature: <ul style="list-style-type: none"> • : 		
Language: <ul style="list-style-type: none"> • German and English skills required 		
Notes: <p>Prerequisites for attending the module: - None</p> <p>Prerequisites for the exam: - Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.</p>		

MZ4400-KP08, MZ4400 - Clinical Medicine (KM)
Duration:

2 Semester

Turnus of offer:

starts every winter semester

Credit points:

8

Course of study, specific field and term:

- Master MES 2020 (compulsory), medical engineering science, 1st and 2nd semester
- Master Medical Informatics 2019 (compulsory), medical computer science, 1st and 2nd semester
- Master Medical Informatics 2014 (compulsory), medical computer science, 1st and 2nd semester
- Master MES 2014 (compulsory), medical engineering science, 1st and 2nd semester

Classes and lectures:

- Clinical Medicine 1 (lecture, 2 SWS)
- Clinical Medicine 2 (lecture, 2 SWS)
- Clinical Medicine 3 (lecture, 2 SWS)

Workload:

- 110 Hours private studies
- 90 Hours in-classroom work
- 40 Hours exam preparation

Contents of teaching:

- Fundamentals of general, visceral, thoracic and vascular surgery, urology, traumatology, orthopedics and pediatric surgery
- Fundamentals of surgical wound management
- Practical applications of medical technology in the eye, otorhinolaryngology, neurology, neurosurgery
- Fundamentals of cardiac surgery, cardiology, cardiovascular laboratory, pulmonology, nephrology
- Use of medical devices in extracorporeal circulation (eg dialysis / hemofiltration, cardiopulmonary bypass, mechanical circulatory support and ventilation)
- Structure and regulation of the cardiovascular system incl. breathing and fluid homeostasis
- Application of medical procedures and their interaction with the patient
- Implementing medical technology procedures in the clinical processes of diagnosis and therapy

Qualification-goals/Competencies:

- Students know the essential surgical diseases and their treatment principles.
- They have an understanding of surgical complications and their management.
- They know the essential head surgical diseases and their treatment principles.
- They know the basic diseases of the cardiovascular, respiratory and renal system and their treatment principles with a particular focus on monitoring organs and substitution processes.
- They know the interaction between medical procedures and patient-oriented application.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- [Prof. Dr. rer. nat. Thorsten Buzug](#)

Teacher:

- Universitätsklinikum S-H
- N.N.

Literature:

- Müller: Chirurgie für Studium und Praxis 2006/07 - Medizinische Verlags- und Informationsdienste.Breisach
- Helmut Rössler, Wolfgang Rüter, Jörn Steinhagen: Orthopädie und Unfallchirurgie - StudentConsult (Broschiert). Urban & Fischer , 19. aktualis. u. erw. Auflage 2005 .ISBN-10: 343744445X
- Mow, Huiskes: Basic orthopaedic biomechanics & mechano-biology
- Ertan Mayatepek: Lehrbuch Pädiatrie - Urban & Fischer bei Elsevier, 2007
- Hautmann/Huland: Urologie - Springer-Verlag

- Moskopp/Wassmann: Neurochirurgie - Schattauer-Verlag
- Kampik: Laserjahrbuch der Augenheilkunde - Biermann-Verlag
- Lang: Augenheilkunde verstehen, lernen und anwenden - Thieme-Verlag

Language:

- offered only in German

Notes:

The module MZ4400 Clinical Medicine consists of the lectures Clinical Medicine 1, Clinical Medicine 2 (both winter semester) and Clinical Medicine 3 (summer semester).

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- None

Examination numbers: MZ4400-L1 Clinical Medicine 1, MZ4400-L2 Clinical Medicine 2, MZ4400-L3 Clinical Medicine 3

CS3010-KP04, CS3010 - Human-Computer-Interaction (MCI)

Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Master Entrepreneurship in Digital Technologies 2020 (optional subject), interdisciplinary competence, Arbitrary semester
- Bachelor Computer Science 2019 (compulsory), foundations of computer science, 5th semester
- Bachelor Robotics and Autonomous Systems 2020 (optional subject), computer science, 5th or 6th semester
- Bachelor Medical Informatics 2019 (optional subject), computer science, 4th to 6th semester
- Master Biophysics 2019 (optional subject), Elective, 1st semester
- Master Psychology 2016 (optional subject), interdisciplinary competence, 3rd semester at the earliest
- Bachelor Computer Science 2016 (compulsory), foundations of computer science, 5th semester
- Bachelor IT-Security 2016 (compulsory), computer science, 3rd semester
- Bachelor Robotics and Autonomous Systems 2016 (optional subject), computer science, 5th or 6th semester
- Master Entrepreneurship in Digital Technologies 2014 (optional subject), interdisciplinary competence, Arbitrary semester
- Master psychology 2013 (optional subject), interdisciplinary competence, 3rd semester
- Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester
- Bachelor Computer Science 2014 (compulsory), foundations of computer science, 5th semester
- Bachelor Medical Informatics 2014 (optional subject), computer science, 5th or 6th semester

Classes and lectures:

- Human-Computer-Interaction (lecture, 2 SWS)
- Human-Computer-Interaction (exercise, 1 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Introduction and overview of the topic area
- Norms and legal foundations
- Human information processing and processes of actions
- Models for human-computer systems and interactive media
- Input/Output devices and interaction technologies
- User-centered development process and special groups of users
- Usability Engineering
- System paradigms and corresponding system examples
- Evaluation and impact analyzes
- Innovative concepts and systems

Qualification-goals/Competencies:

- The students know the principles and methods of the context-, task- and user-centered development of interactive systems.
- They have basic knowledge about human information processing and can introduce it into the design process.
- They know the basic models of interactive systems und can apply them for their analysis and evaluation.
- They have the ability to analyze and review interactive systems based on criteria.

Grading through:

- written exam

Responsible for this module:

- [Prof. Dr.-Ing. Nicole Jochems](#)

Teacher:

- [Institute for Multimedia and Interactive Systems](#)
- [Prof. Dr.-Ing. Nicole Jochems](#)

Literature:

- M. Dahm: Grundlagen der Mensch-Computer-Interaktion - Pearson Studium, 2006
- J.A. Jacko: The Human-Computer Interaction Handbook - CRC Press, 2012

Language:

- offered only in German

Notes:

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- Successful completion of homework assignments as stated in the beginning of the course

Exam(s):

- CS3010-L1 Mensch-Computer-Interaktion, Klausur, 90min, 100% der Modulnote

CS3051-KP04, CS3051 - Parallel Computing (ParallelVa)
Duration:

1 Semester

Turnus of offer:

normally each year in the summer semester

Credit points:

4

Course of study, specific field and term:

- Bachelor Computer Science 2019 (optional subject), major subject informatics, Arbitrary semester
- Bachelor Computer Science 2019 (optional subject), Canonical Specialization SSE, 4th semester
- Bachelor Media Informatics 2020 (optional subject), computer science, 5th or 6th semester
- Bachelor Robotics and Autonomous Systems 2020 (optional subject), computer science, 5th or 6th semester
- Bachelor Computer Science 2016 (optional subject), Canonical Specialization Web and Data Science, 4th semester
- Bachelor Computer Science 2016 (optional subject), major subject informatics, Arbitrary semester
- Bachelor Computer Science 2016 (optional subject), Canonical Specialization SSE, 4th semester
- Bachelor Robotics and Autonomous Systems 2016 (optional subject), computer science, 5th or 6th semester
- Bachelor IT-Security 2016 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester
- Bachelor Computer Science 2014 (optional subject), central topics of computer science, 5th or 6th semester
- Master Computer Science 2012 (optional subject), advanced curriculum programming, 2nd and 3rd semester
- Bachelor Computer Science 2012 (optional subject), central topics of computer science, 5th or 6th semester
- Master Computer Science 2012 (optional subject), advanced curriculum algorithmics and complexity theory, 2nd or 3rd semester

Classes and lectures:

- Parallel Computing (lecture, 2 SWS)
- Parallel Computing (exercise, 1 SWS)

Workload:

- 65 Hours private studies and exercises
- 45 Hours in-classroom work
- 10 Hours exam preparation

Contents of teaching:

- Parallel architectures
- Programming language support for parallel programming
- Design methodologies for parallel algorithms
- Implementation of parallel algorithms
- Parallel search and sorting
- Parallel graph algorithms
- Parallel formula evaluation
- Speedup, efficiency, parallel complexity classes
- Limits of parallelism and lower bounds

Qualification-goals/Competencies:

- Studentes are able to describe the design and function of parallel systems.
- They are able to design and implement parallel algorithms.
- They are able to analyze parallel systems and programs.
- They are able to describe the limits of parallel systems.

Grading through:

- Viva Voce or test

Requires:

- Theoretical Computer Science (CS2000-KP08, CS2000)

Responsible for this module:

- [Prof. Dr. rer. nat. Till Tantau](#)

Teacher:

- [Institute for Theoretical Computer Science](#)
- [Prof. Dr. rer. nat. Till Tantau](#)

Literature:

- Jaja: An Introduction to Parallel Algorithms - Addison Wesley, 1992

- Quinn: Parallel Programming in C with MPI and OpenMP - McGraw Hill, 2004

Language:

- offered only in German

Notes:

Admission requirements for taking the module:
- None (the competencies of the modules listed under

CS3115-KP04, CS5156-KP04, CS5156 - System Architectures for Multimedia (SysArchMM)
Duration:

1 Semester

Turnus of offer:

every summer semester

Credit points:

4

Course of study, specific field and term:

- Bachelor IT-Security 2016 (optional subject), specific, Arbitrary semester
- Bachelor Media Informatics 2020 (optional subject), computer science, 5th or 6th semester
- Bachelor Computer Science 2019 (optional subject), major subject informatics, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2012 (optional subject), advanced curriculum signal and image processing, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), specialization field software systems engineering, 3rd semester
- Master Computer Science 2012 (optional subject), advanced curriculum parallel and distributed system architectures, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), specialization field media informatics, 2nd or 3rd semester

Classes and lectures:

- System Architectures for Multimedia (lecture, 2 SWS)
- System Architectures for Multimedia (exercise, 1 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Performance requirements of multimedia systems on computer and systems
- Instruction set extensions for x86 processors
- System architecture of game consoles and multimedia systems
- Hardware structures for the realization of basic image and video processing operations
- System integration of hardware accelerators
- Programming of multimedia applications with OpenGL
- Protection and authentication of multimedia data

Qualification-goals/Competencies:

- Students are able to categorize instruction set extensions of processors for multimedia applications.
- They are able to discuss the characteristics of the system structure of game consoles and multimedia systems.
- They are able to implement image and video processing algorithms in software by making best use of instruction set extensions.
- They are able to evaluate the usefulness of specific processor architectures and system structures for the realization of multimedia systems.
- They are able to determine appropriate hardware structures for the implementation of image and video processing algorithms.
- They are able to write simple graphic applications with OpenGL.

Grading through:

- see Notes

Responsible for this module:

- [Prof. Dr.-Ing. Mladen Berekovic](#)

Teacher:

- [Institute of Computer Engineering](#)
- [Prof. Dr.-Ing. Mladen Berekovic](#)

Literature:

- A. Nischwitz, M. Fischer, P. Haberäcker, G. Socher: Computergrafik und Bildverarbeitung - Vieweg + Teubner, 2011

Language:

- offered only in German

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Successful completion of exercise assignments as specified at the beginning of the semester

Module Exam(s):

- CS3115-L1: System Architectures for Multimedia, oral exam, 100% of the module grade

CS3830-KP04, CS3830 - Programming for Medical Image Processing in C++ (PmBV)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4 (Typ B)

Course of study, specific field and term:

- Bachelor MES 2014 (optional subject), medical engineering science, 4th or 6th semester
- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester
- Bachelor Medical Informatics 2014 (optional subject), medical computer science, 5th or 6th semester
- Bachelor Medical Informatics 2011 (optional subject), medical computer science, 4th to 6th semester

Classes and lectures:

- Programming for Medical Image Processing in C++ (lecture, 1 SWS)
- Programming for Medical Image Processing in C++ (practical course, 2 SWS)

Workload:

- 70 Hours private studies
- 45 Hours in-classroom work
- 5 Hours oral presentation and discussion (including preparation)

Contents of teaching:

- Introduction to C++ programming for medical image processing
- File formats of medical data and data structure/types
- Vectors, Standard Template Library, Pairs and Tuples
- Class objects, functions and methods
- Loops, also in C++11, lambda functions
- Use of programming libraries (Eigen)
- Implementation of filters for medical image processing
- Dimensionality reduction using PCA
- Search and cluster trees for image processing
- Patch-based non-local means segmentation
- Fast-Fourier transform for template matching
- Integration of C++ in MATLAB (mex)
- Efficient programming for 3d medical images
- Parallel and SIMD programming techniques in C++
- Solve practical project in a team

Qualification-goals/Competencies:

- Students understand the specific challenges of programming for medical image processing.
- They know the basics of object orientated programming.
- They are able to implement local and regional pixel operators (filter, etc) independently.
- They know functions from STL and current trends in C++.
- They are proficient in solving large problems in limited time.
- They can design, implement and test programme code independently.
- They are able to develop practical algorithms for medical image processing based on theoretical concepts.
- They can tackle large scale problems together in teams.

Grading through:

- continuous, successful participation in practical course

Responsible for this module:

- [Prof. Dr. rer. nat. habil. Heinz Handels](#)

Teacher:

- [Institute of Medical Informatics](#)
- [Prof. Dr. Mattias Heinrich](#)

Literature:

- Lippman: C++ Primer - Addison-Wesley Longman, Amsterdam

Language:

- German and English skills required

Notes:

taught as compact course in spring term break (project during term)

CS4000-KP06, CS4000SJ14 - Algorithmics (ALG14)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

6

Course of study, specific field and term:

- Master Computer Science 2019 (compulsory), Canonical Specialization Data Science and AI, Arbitrary semester
- Master Computer Science 2019 (compulsory), Canonical Specialization Bioinformatics and Systems Biology, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (advanced module), technology field computer science, Arbitrary semester
- Master Computer Science 2019 (basic module), Theoretical computer science, 1st or 2nd semester
- Master Medical Informatics 2019 (optional subject), Theoretical computer science, 1st or 2nd semester
- Master IT-Security 2019 (compulsory), Theoretical computer science, 1st or 2nd semester
- Master Medical Informatics 2014 (basic module), computer science, 1st or 2nd semester
- Master Entrepreneurship in Digital Technologies 2014 (basic module), technology field computer science, 1st or 2nd semester
- Master Computer Science 2014 (optional subject), specialization field IT security and safety, 2nd or 3rd semester
- Master Computer Science 2014 (basic module), Theoretical computer science, 1st or 2nd semester

Classes and lectures:

- Algorithmics (lecture, 2 SWS)
- Algorithmics (exercise, 2 SWS)

Workload:

- 100 Hours private studies and exercises
- 60 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- complexity analysis of algorithmic problems
- discrete optimization problems, linear programming
- satisfiability and constraint satisfaction problems
- randomized algorithms
- approximation algorithms and heuristics
- algorithms for algebraic problems

Qualification-goals/Competencies:

- The students can model real problems in an algorithmic manner.
- They can apply basic algorithmic techniques with full command.
- They can analyze algorithms, in particular with respect to correctness and complexity.
- They can design efficient algorithms for complex problems.

Grading through:

- written exam

Requires:

- Theoretical Computer Science (CS2000-KP08, CS2000)
- Algorithm Design (CS3000-KP04, CS3000)

Responsible for this module:

- [Prof. Dr. Rüdiger Reischuk](#)

Teacher:

- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (basic module), technology field computer science, 1st or 2nd semester
- Master Computer Science 2014 (optional subject), specialization field IT security and safety, 2nd or 3rd semester
- Master Computer Science 2014 (basic module), Theoretical computer science, 1st or 2nd semester

Classes and lectures:

- Specification and Modelling (lecture, 2 SWS)
- Specification and Modelling (exercise, 2 SWS)

Workload:

- 80 Hours private studies and exercises
- 60 Hours in-classroom work
- 20 Hours work on project
- 20 Hours exam preparation

Contents of teaching:

- Introduction to modelling and specification
- Modelling concepts (data, streams, traces, diagrams, tables)
- Modelling software components (state, behaviour, structure, interface)
- Modelling concurrency
- Algebraic specification
- Composing, refining, analysing and transforming specifications and models
- Specification languages and tools for specification and modelling

Qualification-goals/Competencies:

- The students can argue on the importance of specifications and models for software development.
- They can characterize, apply, adapt and extend important specification and modelling techniques.
- They can model and specify simple software/hardware system in an adequate way.
- They can describe a system from different views and on different levels of abstraction.
- They can apply specifications and models in software development.
- They can analyse specifications and models.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- [Prof. Dr. Martin Leucker](#)

Teacher:

- [Institute of Software Technology and Programming Languages](#)
- [Dr. Annette Stümpel](#)
- [Prof. Dr. Martin Leucker](#)

Literature:

Language:

- German and English skills required

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Successful completion of exercises as specified at the beginning of the semester.

Module Examination(s):

- CS4020-L1: Specification and Modeling, written exam, 90min, 100% of the module grade.

CS4130-KP06, CS4130 - Information Systems (InfoSys)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

6

Course of study, specific field and term:

- Master Computer Science 2019 (compulsory), Canonical Specialization Data Science and AI, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (basic module), technology field computer science, 1st or 2nd semester
- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2019 (basic module), Applied computer science, 1st or 2nd semester
- Master Medical Informatics 2019 (basic module), Applied computer science, 1st or 2nd semester
- Master Robotics and Autonomous Systems 2019 (optional subject), Elective, 1st or 2nd semester
- Master IT-Security 2019 (basic module), Applied computer science, 1st or 2nd semester
- Master Medical Informatics 2014 (basic module), ehealth / infomatics, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (basic module), technology field computer science, 1st or 2nd semester
- Master Computer Science 2014 (optional subject), specialization field software systems engineering, 2nd or 3rd semester
- Master Computer Science 2014 (basic module), Applied computer science, 1st or 2nd semester

Classes and lectures:

- Information Systems (lecture, 2 SWS)
- Information Systems (exercise, 2 SWS)

Workload:

- 100 Hours private studies
- 60 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Motivation of knowledge graphs and their relationship to the Semantic Web
- Overview over the W3C Semantic Web family of languages
- Comparison between and the interaction of knowledge graphs and generative artificial intelligence such as large language models
- Graph Neural Networks and their applications for tasks of knowledge graphs

Qualification-goals/Competencies:

- Knowledge: Students acquire an overview of knowledge graphs and the Semantic Web as well as generative artificial intelligence such as large language models and graph neural networks.
- Skills: Students can assess the possibilities and limitations of knowledge graphs and the Semantic Web. They can estimate the consequences of the Semantic Web approach for data modeling, data administration and processing and for applications. They can develop Semantic Web applications. They can use generative artificial intelligence such as large language models and graph neural networks to solve tasks for and in addition to knowledge graphs. They can discuss open research questions in the area of knowledge graphs and the semantic web as well as in comparison to generative artificial intelligence and graph neural networks.
- Social skills and independence: Students work in groups to complete exercises and small projects. Students' independent practical work is encouraged through exercises, some of them directly on the computer.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Successful completion of exercises as specified at the beginning of the semester

Module Exam(s):

- CS4130-L1: Information Systems, written exam or oral exam, 100% of module grade

Previous name: Web Based Information Systems

CS4138-KP06, CS4138SJ14 - Model Checking (ModelChe14)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

6

Course of study, specific field and term:

- Master MES 2020 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master IT-Security 2019 (optional subject), IT Safety and Reliability, 1st, 2nd, or 3rd semester
- Master MES 2014 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester
- Master Computer Science 2014 (optional subject), specialization field IT security and safety, 1st or 2nd semester

Classes and lectures:

- Model Checking (lecture, 3 SWS)
- Model Checking (exercise, 1 SWS)

Workload:

- 100 Hours private studies and exercises
- 60 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Quality aspects of software systems
- Analysis and verification techniques for software systems
- Basic techniques for model checking
- Advanced techniques for model checking

Qualification-goals/Competencies:

- The students can describe and compare analysis and verification techniques.
- They can construct, analyse and evaluate specifications of correctness and safety properties.
- They can characterize different system models and can formally represent systems in suitable models.
- They can illustrate different techniques for model checking hardware and software systems and can select and apply suitable techniques.
- They can explain the structure of model checkers and can use model checkers.
- They can evaluate the possibilities and limitations of model checking.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- [Prof. Dr. Martin Leucker](#)

Teacher:

- [Institute of Software Technology and Programming Languages](#)
- [Prof. Dr. Martin Leucker](#)

Literature:

- C. Baier, J.-P. Katoen: Principles of Model Checking - MIT Press, 2008

Language:

Notes:

Prerequisites for attending the module:
- None

Prerequisites for the exam:
- Successful completion of homework assignments during the semester

CS4139-KP06, CS4139 - Runtime Verification and Testing (RVTesten)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

6

Course of study, specific field and term:

- Master MES 2020 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master IT-Security 2019 (optional subject), IT Safety and Reliability, 1st, 2nd, or 3rd semester
- Master MES 2014 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2014 (optional subject), specialization field IT security and safety, 1st or 2nd semester

Classes and lectures:

- Runtime Verification and Testing (lecture, 3 SWS)
- Runtime Verification and Testing (exercise, 1 SWS)

Workload:

- 100 Hours private studies and exercises
- 60 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Quality aspects of software systems
- Analysis and verification techniques for software systems
- Testing levels
- Testing process
- Kinds of tests
- Test case generation
- Specification of correctness properties
- synthesis of monitors for the observation of software systems
- diagnosis of errors in software systems
- realization of monitoring frameworks

Qualification-goals/Competencies:

- The students can describe and compare analysis and verification techniques.
- They can construct, analyse and evaluate specifications of correctness and safety properties.
- They can illustrate different techniques for testing hardware and software systems and can select and apply suitable techniques.
- They can explain the operation process of test case generation tools and can classify suitable applications.
- They can describe and apply techniques for the synthesis of monitors.
- With the acquired techniques they can develop software of higher quality.

Grading through:

- Written or oral exam as announced by the examiner

Language:

- English, except in case of only German-speaking participants

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Successful completion of exercises as specified at the beginning of the semester.

Module Exam(s):

- CS4139-L1: Runtime Verification and Testing, oral exam, 100% of the module grade.

CS4140-KP04, CS4140 - Mobile and Distributed Databases (MVDB)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2012 (optional subject), advanced curriculum distributed information systems, 3rd semester
- Master Computer Science 2012 (compulsory), specialization field software systems engineering, 1st semester

Classes and lectures:

- Mobile and Distributed Databases (lecture, 2 SWS)
- Mobile and Distributed Databases (exercise, 1 SWS)

Workload:

- 65 Hours private studies
- 45 Hours in-classroom work
- 10 Hours exam preparation

Contents of teaching:

- The contents of the lecture covers query processing, transactions and replication in
- - centralised database management systems
- - parallel database management systems
- - distributed database management systems
- - mobile database management systems

Qualification-goals/Competencies:

- Students can explain the differences between centralised, parallel, distributed and mobile database management systems.
- They can judge about the practical suitability of different synchronization approaches for distributed and mobile transactions for a given problem.
- They can apply approaches for distributed and mobile query processing.
- They can choose suitable replication approaches for a given application and justify their choices.
- They can recognize and deal with the special difficulties and sources of error in distributed and mobile environments.

Grading through:

- Oral examination

Responsible for this module:

Language:

- offered only in German

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Active participation in lecture and tutorial

Module Examination(s):

- CS4140-L1: Mobile and Distributed Databases, oral exam, 100% of module grade.

CS4150-KP06, CS4150SJ14 - Distributed Systems (VertSys14)

Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

6

Course of study, specific field and term:

- Master Computer Science 2019 (compulsory), Canonical Specialization SSE, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (basic module), technology field computer science, 1st or 2nd semester
- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2019 (basic module), Applied computer science, 1st or 2nd semester
- Master Medical Informatics 2019 (basic module), Applied computer science, 1st or 2nd semester
- Master Robotics and Autonomous Systems 2019 (optional subject), Elective, 1st or 2nd semester
- Master IT-Security 2019 (basic module), Applied computer science, 1st or 2nd semester
- Master Medical Informatics 2014 (basic module), ehealth / infomatics, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (basic module), technology field computer science, 1st or 2nd semester
- Master Computer Science 2014 (optional subject), specialization field software systems engineering, 2nd or 3rd semester
- Master Computer Science 2014 (basic module), Applied computer science, 1st or 2nd semester

Classes and lectures:

- Distributed Systems (lecture, 2 SWS)
- Distributed Systems (exercise, 2 SWS)

Workload:

- 60 Hours private studies
- 60 Hours in-classroom work
- 40 Hours e-learning
- 20 Hours exam preparation

Contents of teaching:

- Introduction and motivation
- Protocols and layered models
- Message representations
- Realization of network services
- Communication mechanisms
- Addresses, names and directory services
- Synchronisation
- Replication and consistency
- Fault tolerance
- Distributed transactions
- Security

Qualification-goals/Competencies:

- The participants will acquire a deep understanding for problems to be solved in distributed systems, such as synchronization, error handling, naming etc.
- They know the most important services in distributed systems such as name service, distributed file systems etc.
- They are able to program simple distributed applications and systems themselves.
- They know the most important algorithms in distributed systems, for instance for time synchronization, for leader election, or for mutual exclusion.
- They have a good feeling for when it makes sense to use distributed instead of centralized systems.
- They have a good feeling for what kind of solutions could best be used for what kind of problems in distributed Internet applications.

Grading through:

- written exam

Responsible for this module:

Language:

- offered only in German

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- None

Module Exam(s):

- CS4150-L1 Distributed Systems, written exam, 90min, 100% of module grade.

CS4151-KP04, CS4151 - Architectures for Distributed Applications (SVA)

Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Master MES 2020 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master MES 2014 (optional subject), computer science / electrical engineering, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2012 (optional subject), advanced curriculum distributed information systems, 2nd semester
- Master Computer Science 2012 (optional subject), advanced curriculum parallel and distributed system architectures, 2nd or 3rd semester
- Master Computer Science 2012 (compulsory), specialization field software systems engineering, 2nd semester
- Master Computer Science 2012 (compulsory), advanced curriculum enterprise IT, 2nd semester

Classes and lectures:

- Architectures for Distributed Applications (lecture, 2 SWS)
- Architectures for Distributed Applications (exercise, 1 SWS)

Workload:

- 45 Hours in-classroom work
- 45 Hours private studies
- 30 Hours exam preparation

Contents of teaching:

- Motivation
- Software Architectures
- Basics: HTTP, XML & Co
- N-Tier Applications
- Service-Oriented and Event-Driven Architectures (SOA and EDA)
- Web-Oriented Architectures (Web 2.0)
- Overlay Networks
- Peer-to-Peer
- Grid and Cloud Computing
- Internet of Things

Qualification-goals/Competencies:

- The students are able to name the most important architectures for distributed systems, explain them, and compare them to each other.
- For each architecture, they know the most prominent and important implementation platforms and basically know how to use them.
- For a given problem, they can analyze which architecture is best suited to solve it, and they can design a plan for the solution's realization.

Grading through:

- Oral examination

**Notes:**

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Successful completion of exercises as specified at the beginning of the semester.

Module Exam(s):

- CS4151-L1 System Architectures for Distributed Applications, oral exam, 100% of module grade.

CS4160-KP06, CS4160SJ14 - Real-Time Systems (Echtzeit14)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

6

Course of study, specific field and term:

- Master MES 2020 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (advanced module), technology field computer science, Arbitrary semester
- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2019 (basic module), technical computer science, 1st or 2nd semester
- Master Medical Informatics 2019 (optional subject), technical computer science, 1st or 2nd semester
- Master IT-Security 2019 (basic module), technical computer science, 1st or 2nd semester
- Master MES 2014 (optional subject), computer science / electrical engineering, 1st semester
- Master Medical Informatics 2014 (basic module), computer science, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (basic module), technology field computer science, 1st or 2nd semester
- Master Computer Science 2014 (basic module), technical computer science, 1st or 2nd semester

Classes and lectures:

- Real-Time Systems (lecture, 2 SWS)
- Real-Time Systems (exercise, 2 SWS)

Workload:

- 100 Hours private studies
- 60 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Real-time processing (definitions, requirements)
- Process automation systems
- Real-time programming
- Process connectivity and networking
- Modelling of discrete event systems (automata, state charts)
- Modelling of continuous systems (differential equations, Laplace transformation)
- Application of design tools (Matlab/Simulink, Stateflow)

Qualification-goals/Competencies:

- The students are able to describe the fundamental problems of real-time processing.
- They are able to explain real-time computer systems for process automation, in particular SPS.
- They are able to program real-time systems in the IEC languages.
- They are able to elucidate process interfaces and real-time bus system.
- They are able to model, analyze and implement event discrete systems, in particular process control systems.
- They are able to model, analyze and implement continuous systems, in particular feedback control systems.
- They are able to make use of design tools for real-time systems.

Grading through:

- written exam

Admission requirements for participation in module examination(s):

- Successful completion of exercise assignments as specified at the beginning of the semester

Module Exam(s):

- CS4160-L1: Real-Time Systems, written exam, 90min, 100% of the module grade

CS4170-KP06, CS4170SJ14 - Parallel Computer Systems (ParaRSys14)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

6

Course of study, specific field and term:

- Certificate in Artificial Intelligence (compulsory), Artificial Intelligence, 1st semester
- Master Entrepreneurship in Digital Technologies 2020 (advanced module), technology field computer science, Arbitrary semester
- Master Computer Science 2019 (basic module), technical computer science, 1st or 2nd semester
- Master Medical Informatics 2019 (optional subject), technical computer science, 1st or 2nd semester
- Master Robotics and Autonomous Systems 2019 (optional subject), Elective, 1st or 2nd semester
- Master IT-Security 2019 (basic module), technical computer science, 1st or 2nd semester
- Master Medical Informatics 2014 (basic module), computer science, 1st or 2nd semester
- Master Entrepreneurship in Digital Technologies 2014 (basic module), technology field computer science, 1st or 2nd semester
- Master Computer Science 2014 (basic module), technical computer science, 1st or 2nd semester

Classes and lectures:

- Parallel Computer Systems (lecture, 2 SWS)
- Parallel Computer Systems (exercise, 2 SWS)

Workload:

- 100 Hours private studies
- 60 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Motivation and limitations for parallel processing
- Parallel computing models
- Taxonomy of parallel computers
- Multi/manycore-systems
- Graphic Processing Units (GPUs)
- OpenCL
- Specification languages
- Hardware architectures
- System management of many-core systems

Qualification-goals/Competencies:

- Students are able to characterize different parallel computing architectures.
- They are able to explain models of parallel computing.
- They are able to make use of common programming interfaces for parallel computing systems.
- They are able to judge which kind of parallel computing system is best suited for a dedicated problem and how many cores should be used.
- They are able to evaluate the pros and cons of different hardware architectures.
- They are able to write programs for parallel computing systems under considerations of the underlying hardware architecture.
- They are able to compare methods for dynamic voltage and frequency scaling (DVFS) for manycore systems.

Grading through:

- written exam

CS4210-KP06, CS4210 - Cryptographic Protocols (KrypProto)
Duration:

1 Semester

Turnus of offer:

normally each year in the summer semester

Credit points:

6

Course of study, specific field and term:

- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master IT-Security 2019 (optional subject), IT Security and Privacy, 1st, 2nd, or 3rd semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester

Classes and lectures:

- Cryptographic Protocols (lecture, 3 SWS)
- Cryptographic Protocols (exercise, 1,5 SWS)

Workload:

- 85 Hours private studies and exercises
- 75 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Complex cryptographic protocols, security analyses
- Anonymity and Privacy, Private Computation and Information Retrieval, Differential Privacy
- Quantum Cryptographie
- Steganography, digital seals and watermarks
- secure e-commerce, electronic money, online elections

Qualification-goals/Competencies:

- The students can reason about cryptographic methods and their application in communication systems.
- The are able to select suitable security primitives for given applications and to implement them.
- The can conduct a security analysis of communication protocols.
- They can designate the weaknesses of real systems and evaluate them.

Grading through:

- Oral examination

Requires:

- Cryptology (CS3420-KP04, CS3420)

Responsible for this module:

Notes:

Admission requirements for taking the module:
- None (the competencies under

CS4211-KP06, CS4211 - Modeling and Analysing Security (SecurAna_a)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

6

Course of study, specific field and term:

- Master IT-Security 2019 (optional subject), IT Security and Privacy, 1st, 2nd, or 3rd semester
- Master Medical Informatics 2014 (optional subject), major subject informatics, 1st or 2nd semester

Classes and lectures:

- Modeling and Analysing Security (lecture, 3 SWS)
- Modeling and Analysing Security (exercise, 1 SWS)
- Modeling and Analysing Security (practical course, 1 SWS)

Workload:

- 85 Hours private studies and exercises
- 75 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Modelling and formalizing protocols and security properties
- Adversaries and models of attacks, security pitfalls
- Symbolic methods and automatic verification of security properties
- Consistency and synchronization

Qualification-goals/Competencies:

- The students can comprehensively elaborate on algorithmic basics for IT security.
- They can report on security properties.
- They can recite complex methods for IT security and apply them.
- They are able to specify, analyse and verify protocols and security properties.
- They can describe techniques for automatic verification of security properties.

Grading through:

- Oral examination

Requires:

- Cryptology (CS3420-KP04, CS3420)

Responsible for this module:

Notes:

Admission requirements for taking the module:
- None (the competencies under

CS4220-KP04, CS4220 - Pattern Recognition (Muster)
Duration:

1 Semester

Turnus of offer:

not available anymore

Credit points:

4

Course of study, specific field and term:

- Master MES 2020 (optional subject), medical engineering science, Arbitrary semester
- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master MES 2014 (optional subject), medical engineering science, Arbitrary semester
- Master Robotics and Autonomous Systems 2019 (optional subject), Elective, 1st or 2nd semester
- Master CLS 2016 (compulsory), mathematics, 2nd semester
- Master Medical Informatics 2019 (optional subject), Medical Data Science / Artificial Intelligence, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester

Classes and lectures:

- Pattern Recognition (lecture, 2 SWS)
- Pattern Recognition (exercise, 1 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Introduction to probability theory
- Principles of feature extraction and pattern recognition
- Bayes decision theory
- Discriminance functions
- Neyman-Pearson test
- Receiver Operating Characteristic
- Parametric and nonparametric density estimation
- kNN classifiers
- Linear classifiers
- Support vector machines and kernel trick
- Random Forest
- Neural Nets
- Feature reduction and feature transforms
- Validation of classifiers
- Selected application scenarios: acoustic scene classification for the selection of hearing-aid algorithms, acoustic event recognition, attention classification based on EEG data, speaker and emotion recognition

Qualification-goals/Competencies:

- Students are able to describe the main elements of feature extraction and pattern recognition.
- They are able to explain the basic elements of statistical modeling.
- They are able to use feature extraction, feature reduction and pattern classification techniques in practice.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- [Prof. Dr.-Ing. Alfred Mertins](#)

Teacher:

- [Institute for Signal Processing](#)
- [Prof. Dr.-Ing. Alfred Mertins](#)

Literature:

- R. O. Duda, P. E. Hart, D. G. Stork: Pattern Classification - New York: Wiley

Language:

- offered only in German

Notes:

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- Successful completion of homework assignments during the semester (at least 50% of max. points) and successful project task.

Modul exam:

- CS4220-L1:Pattern Recognition, written exam, 90 Min, 100% of modul grade

CS4271-KP08, CS4271 - Artificial Intelligence 2 and Medical Robotics (KI2MedRob)
Duration:

2 Semester

Turnus of offer:

each year, can be started in winter or summer semester

Credit points:

8

Course of study, specific field and term:

- Master Medical Informatics 2019 (optional subject), Medical Data Science / Artificial Intelligence, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester
- Master Computer Science 2014 (compulsory), specialization field robotics and automation, 1st and 2nd semester

Classes and lectures:

- Medical Robotics (lecture, 2 SWS)
- Medical Robotics (exercise, 1 SWS)
- Artificial Intelligence 2 (lecture, 2 SWS)
- Artificial Intelligence 2 (exercise, 1 SWS)

Workload:

- 110 Hours private studies
- 90 Hours in-classroom work
- 40 Hours exam preparation

Contents of teaching:

- Support Vector Machines and Dualization
- Classification
- Regression
- Time-Series Prediction
- Lagrange Multipliers
- Sequential Minimal Optimization
- Geometric Reasoning

Qualification-goals/Competencies:

- Students are able to explain the concepts of forward and inverse kinematics for the examples of 3-joint and 6-joint robots.
- They are able to apply methods of medical robot systems and to simple practical applications.
- Students are able to transfer methods of motion learning to simple practical problems.
- Students are able to modify templates for dynamic calculations in order to create the calculations for their own constructions.
- The students are able to choose a method for machine learning for a given application amongst a variety of such methods.
- The chosen method can be customized to the needs of the application. The process of customization goes well beyond straightforward search of parameters and involves adjustments to the basic mathematical techniques.

Grading through:

- Oral examination

- B. Preim, D. Bartz: Visualization in Medicine - Elsevier, 2007

Language:

- offered only in German

Notes:

This module is no longer offered. It will be replaced by the following two modules: "CS4332 Model and AI-based Image Processing in Medicine" and "CS4333-KP04 Seminar Model and AI-based Image Processing in Medicine".

Prerequisites for attending the module:

- None (The competences of the required modules are required for this module, but the modules are not a prerequisite for admission.)

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.

CS4340-KP04, CS4340SJ14 - Health Economy (GOEK14)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Bachelor MES 2020 (optional subject), medical engineering science, 3rd semester at the earliest
- Master Medical Informatics 2019 (advanced module), medical computer science, 1st or 2nd semester
- Bachelor Biophysics 2016 (optional subject), no specific field, 6th semester
- Bachelor MES 2014 (optional subject), medical engineering science, 4th or 6th semester
- Master Medical Informatics 2014 (compulsory), medical computer science, 1st or 2nd semester

Classes and lectures:

- Health Economy (lecture, 2 SWS)
- Health Economy (exercise, 1 SWS)

Workload:

- 55 Hours private studies and exercises
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Healthcare systems (international comparison)
- PART 1: MACRO-ECONOMICS ASPECTS
- Health Technology Assessment (HTA) as an instrument of evidence-based decision support
- Medical cost-benefit assessment
- Health economic evaluations
- Resource allocation and priority setting
- PART 2: BUSINESS ECONOMICS ASPECTS
- Players in the health care system, social legislation and health care reforms
- Hospital organization and service provision
- Payment modalities in the outpatient and inpatient sector, especially the G-DRG system
- Internal and external accounting: cost & service allocation
- DRG-related cost unit accounting and analysis tools
- Innovation financing for medical technology products and processes

Qualification-goals/Competencies:

- Students can assess the necessity of doing business from the perspective of single actors in the health care market as well as from the perspective of solidarity communities of all insured persons - in the statutory health insurance (GKV).
- They can name and discuss variants of national health systems with alternative control principles and financing models.
- PART 1: MACRO-ECONOMIC PERSPECTIVE
- They can explain the relevance and working methods of the Federal Joint Committee (G-BA) for the approval of procedures and products, including their eligibility for reimbursement in health care in the context of statutory health insurances (GKV).
- They can explain HTA as an instrument to support health-related decisions at system level.
- They can explain clinically relevant endpoints and surrogate parameters, as well as appropriate measures of morbidity.
- They can discuss suitable study forms, their validity (evidence levels) and applications as well as variants and quality criteria of meta-analyses for the demonstration of benefits.
- They can explain cost types and measurement approaches for their determination in health economic studies.
- In addition to the benefit (efficacy), they can also include clinical safety (undesired efficacy).
- They can assess the suitability of data sources for health economic studies and perform sensitivity analysis by changing assumptions and data sources.
- They can apply the acquired knowledge to analyze and critically evaluate concrete HTA reports on the efficacy and cost-effectiveness of medical products and procedures.
- They can identify ethical requirements for approval and reimbursability issues, including the tension between the health care of a population and that of an individual.
- PART 2: BUSINESS ECONOMIC PERSPECTIVE
- They can name variants and conditions for the reimbursement of investment costs and operating costs in outpatient and inpatient care in standard care, including new selective forms of care.
- They can explain the functions and effects of G-DRGs for case-mix-based reimbursement of inpatient treatment cases and calculate and discuss the case mix (index) for specific case constellations.
- They can explain the role of internal accounting (including the delimitation of operational costs and services from expenses and income from financial accounting in accordance with KHBV) for the economic assessment of operational events.
- They can explain the terms fixed/variable and direct/indirect costs, as well as cost type, cost center and cost unit accounting, incl. the

relevance of contribution margin analysis.

- They can outline the analysis of costs and activities in the hospital on the basis of DRG-related cost unit accounting according to the national calculation handbook (InEK Institute).
- In particular, they can carry out internal cost allocation of indirect costs.
- They can interpret the national G-DRG cost modules published annually by the InEK and define their role for benchmarking economical projects of individual hospitals.
- They can perform case mix (profit) optimization with respect to resource constraints using the Simplex algorithm.
- They can explain the mechanisms and conditions of NUBs for innovation financing and the delay of several years for introducing them into the reimbursement catalogues of the statutory health insurance (GKV).

CS4370-KP04, CS4370 - Advanced Techniques of Medical Image Processing (FVMB2014)
Duration:

1 Semester

Turnus of offer:

not available anymore

Credit points:

4

Course of study, specific field and term:

- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester

Classes and lectures:

- Advanced Techniques of Medical Image Processing (lecture, 2 SWS)
- Advanced Techniques of Medical Image Processing (exercise, 1 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Applications of medical image processing techniques
- Image superresolution
- Denoising and inhomogeneity correction
- Linear and non-linear dimensionality reduction
- Patch-based image processing and non-local means
- Fusion of (probabilistic) segmentations (NLM and STAPLE)
- Random-walk algorithm for interactive segmentation
- Non-linear registration and motion estimation (optical flow)
- Similarity metrics for multi-modal fusion
- Introduction into graphical models and discrete optimisation
- Viterbi algorithm and message passing (stereo depth estimation)
- Graph cut segmentation and further applications
- Extraction image features and descriptors
- Matching of corresponding landmarks

Qualification-goals/Competencies:

- Students know a wide range of methods for segmentation, registration and processing of medical images.
- They can describe these methods with correct technical terminology.
- They can transfer image processing techniques into energy minimisation problems.
- They can solve minimisation problems using sparse linear systems.
- They understand methodological relations between different applications and techniques.
- They understand the transfer of continuous problems into the discrete domain.
- They understand solvers for discrete optimisation problems.
- They can compare different algorithms to another and make suitable problem-related choices of methods.
- They have an extended overview of application areas for medical image analysis.

Grading through:

- Written or oral exam as announced by the examiner

- Fusion of (probabilistic) segmentations (NLM and STAPLE)
- Random-walk algorithm for interactive segmentation
- Non-linear registration and motion estimation (optical flow)
- Similarity metrics for multi-modal fusion
- Introduction into graphical models and discrete optimisation
- Viterbi algorithm and message passing (stereo depth estimation)
- Graph cut segmentation and further applications
- Extraction image features and descriptors
- Matching of corresponding landmarks

Qualification-goals/Competencies:

- Students know a wide range of methods for segmentation, registration and processing of medical images.
- They can describe these methods with correct technical terminology.
- They can transfer image processing techniques into energy minimisation problems.
- They can solve minimisation problems using sparse linear systems.
- They understand methodological relations between different applications and techniques.
- They understand the transfer of continuous problems into the discrete domain.
- They understand solvers for discrete optimisation problems.
- They can transfer mathematical concepts into practical algorithms for medical image processing.
- They can proficiently implement these concepts in C++.
- They can compare different algorithms to another and make suitable problem-related choices of methods.
- They have an extended overview of application areas for medical image analysis.

Grading through:

- Oral examination

Requires:

- Medical Image Computing (CS3310-KP04)
- Medical Image Computing (CS3310-KP08, CS3310SJ14)

Responsible for this module:

- [Prof. Dr. rer. nat. habil. Heinz Handels](#)

Teacher:

- Institute of Medical Informatics
- Prof. Dr. Mattias Heinrich

Literature:

- M. Sonka, V. Hlavac, R. Boyle: Image Processing, Analysis and Machine Vision - 2nd edition. Pacific Grove: PWS Publishing 1998

Language:

- offered only in German

Notes:

Admission requirements for taking the module:

- None (the competences of the modules mentioned under "requires" are needed for this module, but are not a formal prerequisite).

Admission requirements for taking module examination(s):

- Successful completion of exercise assignments and programming tasks as specified at the beginning of the semester.

Module Exam(s):

- CS4371-L1: Advanced Methods in Medical Image Processing, oral examination.

This module replaces the module of the same name CS4370, which is no longer offered.

CS4374-KP06 - Medical Deep Learning (MDL)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

6

Course of study, specific field and term:

- Master MES 2020 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master Robotics and Autonomous Systems 2019 (optional subject), Elective, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), medical computer science, 1st or 2nd semester
- Master MES 2014 (optional subject), computer science / electrical engineering, 1st or 2nd semester
- Master Medical Informatics 2019 (advanced module), medical computer science, 1st or 2nd semester

Classes and lectures:

- Medical Deep Learning (lecture, 2 SWS)
- Medical Deep Learning (exercise, 2 SWS)

Workload:

- 80 Hours private studies
- 60 Hours in-classroom work
- 40 Hours exam preparation

Contents of teaching:

- Cardiac Healthcare:
- ECG signal analysis for arrhythmia detection or sleep apnea and for mobile low-cost devices
- MRI sequence analysis for anatomical segmentation and temporal modelling
- Multimodal Clinical Case Retrieval / Prediction:
- Pathology and Semantic Image Retrieval and Localisation
- Analysis of text / natural language (radiology reports/study articles) for multimodal data mining in Electronic Health Records (EHR)
- Computer Aided Detection and Disease Classification:
- CT Lung nodule detection for cancer screening with data augmentation and transfer learning
- Weakly-supervised abnormality detection and biomarker discovery
- Interpretable and reliable deep learning systems
- Human interaction and correction within deep learning models
- Visualisation of uncertainty and internally learned representations
- Deep Learning Concepts, Architectures and Hardware
- Convolutional Neural Networks, Layers, Deep Residual Learning
- Losses, Derivatives, Large-scale Stochastic Optimisation
- Directed Acyclic Graph Networks, Generative Adversarial Networks
- Cloud Computing, GPUs, Low Precision Computing, DL Frameworks

Qualification-goals/Competencies:

- Students know the importance of data security, patient anonymisation and ethics for clinical studies involving sensitive data
- They know methods and tools to collect, preprocess, store and annotate large datasets for deep learning from medical data
- They have an in-depth understanding of deep / convolutional neural networks for general data (signals / text / images) processing, their learning process and evaluation of their performance on unseen data
- They understand the principles of weakly-supervised learning, transfer learning, concept discovery and generative adversarial networks
- They know how to explore learned feature representations for retrieval and visualisation of high-dimensional abstract data
- They can implement modern network architectures in DL frameworks and are able to adapt and extend them to given problems in medicine
- They have a broad overview of current applications of deep learning in medicine in both research and clinical practice and can transfer their knowledge to newly emerging domains

Grading through:

- Oral examination

Responsible for this module:

- [Prof. Dr. Mattias Heinrich](#)

Teacher:

- [Institute of Medical Informatics](#)
- [Prof. Dr. Mattias Heinrich](#)

Literature:

- Ian Goodfellow, Yoshua Bengio and Aaron Courville: Deep Learning - The MIT Press

Language:

- English, except in case of only German-speaking participants

Notes:

Admission requirements for taking the module:

- None

Admission requirements for taking module examination(s):

- Successful completion of exercise assignments and programming tasks as specified at the beginning of the semester.

Module Exam(s):

- CS4374-L1 Medical Deep Learning, , oral examination.

CS4670-KP04, CS4670 - Ambient Computing (AmbComp)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Master Medical Informatics 2019 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Media Informatics 2014 (compulsory), media informatics, 2nd semester

Classes and lectures:

- Ambient Computing (lecture, 3 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Current paradigms in computer technology
- Smart components
- Software architectures
- Context-sensitive systems
- Ambient Intelligence
- Interactive ambient media systems
- Ambient Computing Applications (AAL)
- Ethical, Legal and Social Implications (ELSI).

Qualification-goals/Competencies:

- The students are able to evaluate possibilities, concepts and challenges of Ambient Systems
- They have an overview about current technologies and systems for developing Ambient Systems
- They are able to follow and judge state-of-the-art research in the area of Ambient Computing

Grading through:

- Oral examination

Responsible for this module:

- [Prof. Dr.-Ing. Andreas Schrader](#)

Teacher:

- [Institute of Telematics](#)
- [Prof. Dr.-Ing. Andreas Schrader](#)

Literature:

- John Krumm: Ubiquitous Computing Fundamentals - CRC Press, 2009

Language:

- English, except in case of only German-speaking participants

Notes:

Admission requirements for taking the module:
- None

Admission requirements for participation in module examination(s):
- none

Module Examination(s):
- CS4670-L1: Ambient Computing, oral examination, 100% of module mark.

CS5130-KP04, CS5130 - Foundations of Ontologies and Databases for Information Systems (OntoDB)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master CLS 2010 (optional subject), computer science, Arbitrary semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester

Classes and lectures:

- Foundations of Ontologies and Databases in Information Systems (lecture, 2 SWS)
- Foundations of Ontologies and Databases in Information Systems (exercise, 1 SWS)

Workload:

- 60 Hours private studies
- 45 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Fundamentals of databases, conceptual modeling languages (ontologies), query languages, processes, and agents
- Ontology based data access (OBDA)
- Ontology evolution and ontology integration
- Data exchange and data integration (schema mappings, duplicate detection, inconsistency handling, integration with relational and ontological constraints as well as with incomplete data)
- Data stream processing (e.g., for sensor networks, robotics, web agents) with OBDA and complex event processing (CEP)
- Non-symbolic data and their symbolic annotations (e.g., for applications in bioinformatics/computational biology and for media interpretation), syntax, semantics, hybrid decision and computation problems and their complexity, (analysis of) algorithms
- Data- and ontology-oriented process analysis (e.g., for biological pathways) and process design (e.g., for non-trivial business processes)

Qualification-goals/Competencies:

- Knowledge: The module aims at introducing the students to the formal basics of databases and ontologies, so that they get an overview of concepts, methods, and theories for understanding, analyzing, and designing information systems in open large contexts, such as the web.
- Skills: The students get a basic understanding of logical and formal methods, which allows them to assess the possibilities and limitations of information systems, be it concrete ones or those that still have to be designed. Assessment parameters are correctness and completeness (Does the system produce what is expected? If so, does it produce all results?) as well as expressiveness (Is it possible to formulate all required queries? What are equivalent query languages?) and, last but not least, performance (How long does it take the system to come up with an answer? How much space does it need?). In addition to these analysis skills, students receive logical modeling skills using real application scenarios from industry (business processing, integration of data resources, processing of time-based and event data), and medicine (sensor networks, genomic ontologies, annotation). Based on these, the student not only acquires the ability to assess which logical model is suitable for which application scenario, but also the ability to construct their own logical models where necessary.
- Social Competence und Independent Work: Students work in groups to solve small exercises and project problems and sketch their solutions in short presentations. Independent work is promoted by exercises with practical ontology and database systems.

Grading through:

- written exam

Is requisite for:

- Web-Mining Agents (CS5131-KP08, CS5131)

Responsible for this module:

- Prof. Dr. rer. nat. habil. Ralf Möller

Teacher:

- Institute of Information Systems
- Prof. Dr. rer. nat. habil. Ralf Möller
- PD Dr. Özgür Özçep

Literature:

- L. Libkin: Elements Of Finite Model Theory (Texts in Theoretical Computer Science. An Eatcs Series) - SpringerVerlag, 2004

Language:

- offered only in English

Notes:

Prerequisites for this module are:

- Algorithm and Data Structures (CS1001)
- Linear Algebra and Discrete Structures I+II (MA1000, MA1500)
- Databases (CS2700)

Recommended additional modules:

- Logic (CS1002)
- Bachelor Project Computer Science (CS3701), topic: logic programming
- Nonstandard Database Systems (CS3202)

CS5131-KP08, CS5131 - Web-Mining Agents (WebMining)

Duration:	Turnus of offer:	Credit points:
1 Semester	not available anymore	8
Course of study, specific field and term:		
<ul style="list-style-type: none"> • Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester • Master Medical Informatics 2019 (optional subject), ehealth / infomatics, 1st or 2nd semester • Master CLS 2010 (optional subject), computer science, Arbitrary semester • Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester • Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester 		
Classes and lectures:		Workload:
<ul style="list-style-type: none"> • Web-Mining Agents (lecture, 4 SWS) • Web-Mining Agents (exercise, 1 SWS) • Web-Mining Agents (practical course, 1 SWS) 		<ul style="list-style-type: none"> • 120 Hours private studies • 90 Hours in-classroom work • 30 Hours exam preparation
Contents of teaching:		
<ul style="list-style-type: none"> • Probabilities and generative models for discrete data • Gaussian models, Bayesian and frequentist statistics, regression, • Probabilistic graphical models (e.g., Bayesian networks), learning parameters and structures of probabilistic graphical models (BME, MAP, ML, EM algorithm), probabilistic classification, probabilistic relational models • Probabilistic reasoning over time (dynamic Bayesian networks, Markov assumption, transition model, sensor model, inference problems: filtering, prediction, smoothing, most-likely explanation, hidden Markov models, Kalman filters, exact inferences and approximations, learning dynamic Bayesian networks) • Structural Causal Networks (Intervention, instrumental Variables, counterfactuals) • Mixture models, latent linear models (LDA, LSI, PCA), sparse linear models, • Decision making under uncertainty (utility theory, decision networks, value of information, sequential decision problems, value iteration, policy iteration, MDPs, decision-theoretic agents, POMDPs, reduction to multidimensional continuous MDPs, dynamic decision networks) • Game theory, decisions with multiple agents (Nash equilibrium, Bayes-Nash equilibrium), social choice (voting, preferences, paradoxes, Arrow's Theorem, mechanism design (controlled autonomy)), rules of encounter • Multimedia interpretation for web (re-)search (probabilistic ranking of interpretations, link analysis (e.g., citations), social network analysis) • Building and exchanging symbolic annotations for web data (from named entity recognition to discourse representations) • Information association, retrieval, query answering and recommendation 		
Qualification-goals/Competencies:		
<ul style="list-style-type: none"> • Knowledge: Students can explain the agent abstraction, define web mining of rational behavior, and give details about the design of mining agents (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques. Students can explain the difference between instance-based and model-based learning approaches, and they can enumerate basic machine learning technique for each of the two basic approaches, either on the basis of static data, or on the basis of incrementally incoming data. For dealing with uncertainty, students can describe suitable representation formalisms, and they explain how axioms, features, parameters, or structures used in these formalisms can be learned automatically with different algorithms. Students are also able to sketch different clustering techniques. They depict how the performance of learned classifiers can be improved by ensemble learning, and they can summarize how this influences computational learning theory. Algorithms for reinforcement learning can also be explained by students. • Skills: Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply basic optimization techniques. For those applications they can also create Bayesian networks/dynamic Bayesian networks and apply Bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states, e.g., Nash 		

equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results. Students derive decision trees and, in turn, propositional rule sets from static data as well as temporal or streaming data. Students present and apply the basic idea of first-order inductive learning. They apply the BME, MAP, ML, and EM algorithms for learning parameters of Bayesian networks and compare the different algorithms. They also know how to carry out Gaussian mixture learning. Students can describe basic clustering techniques and explain the basic components of those techniques. Students compare related machine learning techniques, e.g., k-means clustering and nearest neighbor classification. They can distinguish various ensemble learning techniques and compare the different goals of those techniques.

- Social competence: Students work in groups in order to solve small exercise and project assignments and present them in short talks in the plenum. In the associated project lab the students develop a larger project using up-to-date programming languages and software tools for data science applications.

Grading through:

- Written or oral exam as announced by the examiner

CS5150-KP04, CS5150 - Organic Computing (OrganicCom)
Duration:

1 Semester

Turnus of offer:

irregularly

Credit points:

4

Course of study, specific field and term:

- Master Entrepreneurship in Digital Technologies 2020 (advanced module), technology field computer science, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), bioinformatics, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), bioinformatics, 1st or 2nd semester
- Master Computer Science 2012 (optional subject), advanced curriculum parallel and distributed system architectures, 2nd or 3rd semester
- Master CLS 2010 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2012 (compulsory), advanced curriculum organic computing, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), specialization field robotics and automation, 3rd semester

Classes and lectures:

- Organic Computing (lecture, 2 SWS)
- Organic Computing (exercise, 1 SWS)

Workload:

- 60 Hours private studies
- 45 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Basic principles of Organic Computing
- Self-organization and emergence
- Architecture and design of Organic Computing systems
- Organic Computing for distributed systems
- Organic Computing in Neuro- and Bioinformatics
- Organic Grid
- Autonomous Systems

Qualification-goals/Competencies:

- Students are able to utilize the principles of organic computing on exemplary designs.
- They are able to explain the principles of Organic Computing.
- They are able to analyze emergence behavior in Organic Computing systems.

Grading through:

- written exam

Responsible for this module:

- [Prof. Dr.-Ing. Mladen Berekovic](#)

Teacher:

- [Institute of Computer Engineering](#)
- Dr. rer. nat. Javad Ghofrani

Literature:

- C. Müller-Schloer, H. Schmeck, T. Ungerer: Organic Computing – A Paradigm Shift for Complex Systems - Birkhäuser, 2011
- R. P. Würtz: Organic Computing - Springer, 2008
- C. Klüver, J. Kluever, J. Schmidt: Modellierung komplexer Prozesse durch naturanaloge Verfahren - Springer Vieweg 2012

Language:

- offered only in German

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Successful completion of exercise assignments as specified at the beginning of the semester

Module Exam(s):

- CS5150-L1: Organic Computing, oral exam, 100% of the module grade

CS5153-KP04, CS5153 - Wireless Sensor Networks (DISensorN)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester
- Master Computer Science 2012 (optional subject), specialization field IT security and safety, 3rd semester
- Master Computer Science 2012 (optional subject), advanced curriculum parallel and distributed system architectures, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), advanced curriculum organic computing, 2nd or 3rd semester

Classes and lectures:

- Wireless Sensor Networks (lecture, 2 SWS)
- Wireless Sensor Networks (exercise, 1 SWS)

Workload:

- 60 Hours private studies
- 45 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Basics of Sensor Networks
- Architecture of Sensor Nodes and of Sensor Networks
- Identities and addressing
- Wireless communication
- Data management and topology control
- Time Synchronization
- Localization
- Energy harvesting
- Applications

Qualification-goals/Competencies:

- The students are able to present the potential, benefits and limitations of sensor networks.
- They are able to cope with analysis, design, and evaluation of protocols in sensor networks.
- They are able to interpret and pursue current research activities for sensor networks.

Grading through:

- Oral examination

Responsible for this module:

- [Prof. Dr.-Ing. Mladen Berekovic](#)

Teacher:

- [Institute of Computer Engineering](#)
- Dr. rer. nat. Javad Ghofrani

Literature:

- H. Karl, A. Willig: Protocols and Architectures of Wireless Sensor Networks - Wiley, 2005
- F. Zhao, L. Guibas: Wireless Sensor Networks - Morgan Kaufmann, 2004
- B.-C. Renner: Sustained Operation of Sensor Nodes with Energy Harvesters and Supercapacitors - Books on Demand 2013

Language:

- offered only in English

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- Successful completion of exercise assignments as specified at the beginning of the semester

Module Exam(s):

- CS5153-L1: Wireless Sensor Networks, oral exam, 100% of the module grade

CS5158-KP04, CS5158 - Advanced Internet Technologies (AdInternet)

Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2012 (optional subject), advanced curriculum enterprise IT, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), specialization field software systems engineering, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), advanced curriculum distributed information systems, 2nd or 3rd semester

Classes and lectures:

- Advanced Internet Technologies (lecture, 2 SWS)
- Advanced Internet Technologies (exercise, 1 SWS)

Workload:

- 60 Hours private studies
- 45 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Introduction and fundamentals
- Fundamental Internet design principles
- Problems of today's Internet architecture
- Backbone Technologies
- Mobile Internet
- IPv6 und related topics
- Delay Tolerant Networks (DTN)
- Internet of Services / Internet of Things
- Peer-To-Peer networks
- Big Data
- Goals, architectures, algorithms, and protocols for the future Internet

Qualification-goals/Competencies:

- Understand the fundamental design decisions that have led to today's Internet architecture
- Understand the original design goals of the Internet and realize the implications that the emphasis on certain of them has on today's networks
- Learn about essential, universally valid criteria for the design of networks and applications (e.g., end-to-end argument, fate sharing, etc.)
- Know technological as well as societal developments that have led to massive changes in the Internet's infrastructure (growth, innovations, mobile communications,)
- Identify problems of the Internet's architecture and understand potential solutions by comparing different approaches
- Become acquainted with the Future Internet research field and learn about novel approaches to research and shape the Internet of the future

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- [Prof. Dr. Stefan Fischer](#)

Teacher:

- [Institute of Telematics](#)
- [Dr. Mohamed Hail](#)

Literature:

- Olivier Hersent, David Boswarthick, Omar Elloumi: The Internet of Things: Key Applications and Protocols - Wiley, 2012

- E. Pacitti, R. Akbarinia, M. El-Dick: P2P Techniques for Decentralized Applications - Morgan & Claypool Publishers

Language:

- German and English skills required

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- None

Module Examination(s):

- CS5158-L1: Advanced Internet Technologies, oral examination, 100% of module mark.

(Is also part of CS4518-KP12)

CS5260-KP04, CS5260SJ14 - Speech and Audio Signal Processing (SprachAu14)		
Duration:	Turnus of offer:	Credit points:
1 Semester	every second semester	4
Course of study, specific field and term:		
<ul style="list-style-type: none"> • Master CLS 2023 (optional subject), Elective, Arbitrary semester • Master Robotics and Autonomous Systems 2019 (optional subject), Elective, Arbitrary semester • Master MES 2020 (optional subject), medical engineering science, Arbitrary semester • Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester • Master Medical Informatics 2019 (optional subject), Medical Data Science / Artificial Intelligence, 1st or 2nd semester • Master MES 2014 (optional subject), medical engineering science, Arbitrary semester • Master CLS 2010 (optional subject), computer science, Arbitrary semester • Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester • Master Media Informatics 2014 (optional subject), computer science, Arbitrary semester 		
Classes and lectures:		Workload:
<ul style="list-style-type: none"> • Speech and Audio Signal Processing (lecture, 2 SWS) • Speech and Audio Signal Processing (exercise, 1 SWS) 		<ul style="list-style-type: none"> • 55 Hours private studies • 45 Hours in-classroom work • 20 Hours exam preparation
Contents of teaching:		
<ul style="list-style-type: none"> • Speech production and human hearing • Physical models of the auditory System • Dynamic compression • Spectral analysis: Spectrum and cepstrum • Spectral perception and masking • Vocal tract models • Linear prediction • Coding in time and frequency domains • Speech synthesis • Noise reduction and echo compensation • Source localization and spatial reproduction • Basics of automatic speech recognition 		
Qualification-goals/Competencies:		
<ul style="list-style-type: none"> • Students are able to describe the basics of human speech production and the corresponding mathematical models. • They are able to describe the process of human auditory perception and the corresponding signal processing tools for mimicing auditory perception. • They are able to present basic knowledge of statistical speech modeling and automatic speech recognition. • They can describe and use signal processing methods for source separation and room-acoustic measurements. 		
Grading through:		
<ul style="list-style-type: none"> • Written or oral exam as announced by the examiner 		
Responsible for this module:		
<ul style="list-style-type: none"> • Prof. Dr.-Ing. Markus Kallinger 		
Teacher:		
<ul style="list-style-type: none"> • Institute for Signal Processing • Prof. Dr.-Ing. Markus Kallinger 		
Literature:		
<ul style="list-style-type: none"> • L. Rabiner, B.-H. Juang: Fundamentals of Speech Recognition - Upper Saddle River: Prentice Hall 1993 • J. O. Heller, J. L. Hansen, J. G. Proakis: Discrete-Time Processing of Speech Signals - IEEE Press 		
Language:		
<ul style="list-style-type: none"> • offered only in German 		

Notes:

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- Successful completion of assignments during the semester.

Modul exam:

- CS5260-L1: Speech and Audio Signal Processing, written or oral exam, 100% of modul grade

Mentioned in SGO MML under CS5260 (without SJ14).

CS5275-KP04, CS5275 - Selected Topics of Signal Analysis and Enhancement (AMSAV)
Duration:

1 Semester

Turnus of offer:

every second semester

Credit points:

4

Course of study, specific field and term:

- Master MES 2020 (optional subject), medical engineering science, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), Medical Data Science / Artificial Intelligence, 1st or 2nd semester
- Master MES 2014 (optional subject), medical engineering science, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester
- Master CLS 2010 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2012 (optional subject), specialization field bioinformatics, 3rd semester
- Master MES 2011 (advanced curriculum), imaging systems, signal and image processing, 1st or 2nd semester
- Master Computer Science 2012 (optional subject), advanced curriculum signal and image processing, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), specialization field robotics and automation, 3rd semester
- Master Computer Science 2012 (optional subject), advanced curriculum intelligent embedded systems, 2nd or 3rd semester

Classes and lectures:

- Selected Topics of Signal Analysis and Enhancement (lecture, 2 SWS)
- Selected Topics of Signal Analysis and Enhancement (exercise, 1 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Introduction to statistical signal analysis
- Autocorrelation and spectral estimation
- Linear estimators
- Linear optimal filters
- Adaptive filters
- Multichannel signal processing, beamforming, and source separation
- Compressed sensing
- Basic concepts of multirate signal processing
- Nonlinear signal processing algorithms
- Application scenarios in auditory technology, enhancement, and restoration of one- and higher-dimensional signals, Sound-field measurement, noise reduction, deconvolution (listening-room compensation), inpainting

Qualification-goals/Competencies:

- Students are able to explain the basic elements of stochastic signal processing and optimum filtering.
- They are able to describe and apply linear estimation theory.
- Students are able to describe the concepts of adaptive signal processing.
- They are able to describe and apply the concepts of multichannel signal processing.
- They are able to describe the concept of compressed sensing.
- They are able to analyze and design multirate systems.
- Students are able to explain various applications of nonlinear and adaptive signal processing.
- They are able to create and implement linear optimum filters and nonlinear signal enhancement techniques on their own.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- Prof. Dr.-Ing. Markus Kallinger

Teacher:

- [Institute for Signal Processing](#)
- Prof. Dr.-Ing. Markus Kallinger

Literature:

- Signalschätzung - Springer-Vieweg, 3. Auflage, 2013
- S. Haykin: Adaptive Filter Theory - Prentice Hall, 1995

Language:

- German and English skills required

Notes:

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- Successful completion of homework assignments during the semester (at least 50%).

Modul exam:

- CS5275-L1: Selected Topics of Signal Analysis and Enhancement, written or oral exam, 100% of modul grade

CS5450-KP04, CS5450 - Machine Learning (MaschLern)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Master CLS 2023 (optional subject), computer science, 3rd semester
- Master Auditory Technology 2022 (optional subject), computer science, 1st semester
- Master MES 2020 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master Media Informatics 2020 (optional subject), computer science, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), Medical Data Science / Artificial Intelligence, 1st or 2nd semester
- Master Auditory Technology 2017 (optional subject), computer science, 1st semester
- Master CLS 2016 (optional subject), computer science, 3rd semester
- Master MES 2014 (optional subject), computer science / electrical engineering, Arbitrary semester
- Master MES 2011 (optional subject), mathematics, 1st or 2nd semester
- Master MES 2011 (advanced curriculum), imaging systems, signal and image processing, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), computer science, 1st or 2nd semester
- Master CLS 2010 (optional subject), computer science, Arbitrary semester
- Master Computer Science 2012 (optional subject), specialization field robotics and automation, 3rd semester
- Master Computer Science 2012 (optional subject), specialization field bioinformatics, 3rd semester

Classes and lectures:

- Machine Learning (lecture, 2 SWS)
- Machine Learning (exercise, 1 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Representation learning, including manifold learning
- Statistical learning theory
- VC dimension and support vector machines
- Boosting
- Deep learning
- Limits of induction and importance of data ponderation

Qualification-goals/Competencies:

- Students can understand and explain various machine-learning problems.
- They can explain and apply different machine learning methods and algorithms.
- They can chose and then evaluate an appropriate method for a particular learning problem.
- They can understand and explain the limits of automatic data analysis.

Grading through:

- Oral examination

Responsible for this module:

- [Prof. Dr.-Ing. Erhardt Barth](#)

Teacher:

- [Institute for Neuro- and Bioinformatics](#)
- [Prof. Dr.-Ing. Erhardt Barth](#)
- [Prof. Dr. rer. nat. Thomas Martinetz](#)

Literature:

Notes:

Admission requirements for taking the module:

- None

Admission requirements for participation in module examination(s):

- None

Module exam(s):

- CS5450-L1: Machine Learning, oral examination, 100% of module grade

CS5460-KP05 - Analysis of High-Throughput Data (AnaHDD)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

5

Course of study, specific field and term:

- Master Medical Informatics 2014 (optional subject), bioinformatics, 1st or 2nd semester

Classes and lectures:

- Analyse von Hochdurchsatzdaten (lecture, 2 SWS)
- Analyse von Hochdurchsatzdaten (exercise, 2 SWS)

Workload:

- 70 Hours private studies
- 60 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Learn statistical background and methods for analysis of next generation sequencing
- Introduction to common sequencing methods: RNA-seq, ChIP-seq, Whole Genome Sequencing, Whole Exome Sequencing, Hi-C seq, 4-C seq, 5-C seq, Single Cell Sequencing
- Basis of data analysis: statistics, methods and software
- Judge data quality and experimental design
- Use public databases for annotation, analysis and data download

Qualification-goals/Competencies:

- The students can analyse next generation high throughput sequencing data.
- The students know the different sequencing methods and their advantages and challenges.
- The students know how to approach the analysis of high throughput data, can interpret the results and annotate the data. The students know different workflows for data modelling and analysis.
- The students can use public databases for data download, integration and analysis
-

Grading through:

- Written or oral exam as announced by the examiner

Language: <ul style="list-style-type: none"> • German and English skills required 		
Notes:		

Prerequisites for attending the module:

- none

Prerequisites for participation in module exam(s):

- none

- Prerequisites for admission to the (written) examination may be scheduled at the beginning of the semester. When prerequisites are defined, they should be completed and positively evaluated before the initial (written) examination.

Module exam(s):

- EC4008-L1: Entrepreneurship and Innovation, portfolio exam, 100% of module grade

The portfolio exam consists of the following:

-□ Individual written assignment, 15 %

-□ Group work (Presentation), 45 %

-□ (Online)exams, 40 %

The commercial rounding is used to determine the overall grade.

Students for whom this course is a compulsory module have priority.

Registration takes place at the beginning of the semester via Moodle. Further registration and exam-related questions will be clarified during the first lectures.

(Is equal to EC4008 T-KP04)

(Replaces PS5830-KP04)

EC4010-KP04, EC4010 - Commercial Law (WirtRecht)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Master Computer Science 2019 (optional subject), interdisciplinary competence, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (optional subject), interdisciplinary competence, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), interdisciplinary competence, 1st or 2nd semester
- Master Interdisciplinary Courses (optional subject), Interdisciplinary modules, Arbitrary semester
- Master MES 2014 (optional subject), no specific field, Arbitrary semester
- Bachelor MES 2014 (optional subject), no specific field, 3rd semester at the earliest
- Master Medical Informatics 2014 (optional subject), interdisciplinary competence, 1st or 2nd semester
- Master Computer Science 2014 (optional subject), interdisciplinary competence, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (optional subject), interdisciplinary competence, Arbitrary semester

Classes and lectures:

- Commercial Law (lecture, 2 SWS)
- Commercial Law (exercise, 1 SWS)

Workload:

- 60 Hours private studies
- 45 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- The importance of legal aspects in entrepreneurship especially in the high-tech sector
- legal acts
- contract law
- technology protection and intellectual property (know how, patents, trademarks, designs, with license rights)
- labor law
- corporate law
- enforcement of legal claims

Qualification-goals/Competencies:

- The objective of the course is to provide students with a basic knowledge of legal subjects relevant for scientists, medical doctors, engineers and computer scientists in technology-driven enterprises or in research at a university.
- Students will gain an understanding of legal reasoning to help them avoid pitfalls and exploit to the fullest extent opportunities in R&D projects and startup companies.

Grading through:

- written exam

Responsible for this module:

- none

Prerequisites for participation in module exam(s):

- none

- Prerequisites for admission to the (written) examination may be scheduled at the beginning of the semester. When prerequisites are defined, they should be completed and positively evaluated before the initial (written) examination.

Module exam(s):

- EC4010-L1: Commercial Law, written exam, 60 min, 100 % of module grade

LS1600-KP04 - Organic Chemistry (OCKP04)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Bachelor CLS 2023 (compulsory), life sciences, 4th semester
- Bachelor Biophysics 2024 (compulsory), life sciences, 2nd semester
- Master Medical Informatics 2019 (optional subject), bioinformatics, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), bioinformatics, 1st or 2nd semester
- Bachelor CLS 2016 (compulsory), life sciences, 4th semester
- Bachelor Biophysics 2016 (compulsory), life sciences, 2nd semester

Classes and lectures:

- Organic Chemistry (lecture, 3 SWS)
- Organic Chemistry (exercise, 1 SWS)

Workload:

- 60 Hours private studies
- 60 Hours in-classroom work

Contents of teaching:

- Lectures:
- Alkanes, cycloalkanes
- Alkenes and Alkynes
- Aromatics
- Stereochemistry
- Substitution and elimination reactions
- Alcohols, phenols and thiols
- Ether and epoxides
- Aldehydes and ketones
- Carboxylic acids and derivativs
- Amines and derivativs
- Heterocycles
- Lipids
- Carbohydrates
- Amino acids and peptides
- Nucleotides and nucleic acids
- Exercises:
- Students discuss problems covering all topics of the lectures on the black board

Qualification-goals/Competencies:

- After successful completion of the course, students have a fundamental knowledge of organic chemistry. They are confident using structural formulas of substance classes and functional groups presented in the course. They are confident in the nomenclature and can correctly describe relative and absolute configurations of molecules.
- Students know the most important reactions, reaction types and reaction principles of organic chemistry. They understand the structural properties of functional groups and are able to formulate organic chemical reaction mechanisms of these groups.
- Students can transfer and apply the acquired skills to problems of other branches of chemistry and related sciences and are thus able to participate in continuative courses.

Grading through:

- written exam

Requires:

- General Chemistry (LS1100-KP04)

- Hart, H., L. E. Craine, D. J. Hart: Organische Chemie - Wiley-VCH
- Buddrus, J.: Organische Chemie - De Gruyter Verlag

Language:

- offered only in German

Notes:

Knowledge of basic chemistry (such as from LS1100-INF) is required.

Prerequisites for attending the module:

- None (The competencies of the modules listed under 'Requires' are needed for this module, but are not a formal prerequisite)

Prerequisites for the exam:

- Examination prerequisites can be defined at the beginning of the semester. If preliminary work is defined, it must have been completed and positively evaluated before the first examination.

Module exam:

LS1600-L1: Organic Chemistry, written exam, 90 min, 100 of % module grade

LS3151-KP04, LS3151 - Molecular Biology (MolBioINF)
Duration:

1 Semester

Turnus of offer:

not available anymore

Credit points:

4

Course of study, specific field and term:

- Master Computer Science 2019 (compulsory), Canonical Specialization Bioinformatics and Systems Biology, Arbitrary semester
- Master Computer Science 2019 (optional subject), Elective, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), bioinformatics, 1st or 2nd semester
- Master Computer Science 2014 (compulsory), specialization field bioinformatics, 1st, 2nd, or 3rd semester
- Master Medical Informatics 2014 (optional subject), bioinformatics, 1st or 2nd semester
- Master Computer Science 2012 (compulsory), specialization field bioinformatics, 2nd semester

Classes and lectures:

- Molecular Biology (lecture, 2 SWS)
- Molecular Biology (seminar, 2 SWS)

Workload:

- 60 Hours private studies
- 60 Hours in-classroom work

Contents of teaching:

- Lecture: Molecular basis for processing and analysis of biological data (nucleic acids, genome sequencing, DNA polymorphism, infection biology, host genome and virus infection, stem cell biology)
- Seminar: Scientific article reading and oral presentation
- understanding scientific context
- training in reading English in science

Qualification-goals/Competencies:

- Students are able to present basic molecular biological requirements for processing and analysis of biological data.
- They are able to explain the molecular biological terms genome, transcriptome and proteome.
- They acquire the competence to handle English literature and to present it in a scientific oral presentation.

Grading through:

- Oral examination

Responsible for this module:

- Prof. Dr. rer. nat. Norbert Tautz

Teacher:

- [Institute of Virology and Cell Biology](#)
- Dr. rer. nat. Olaf Isken
- Prof. Dr. rer. nat. Norbert Tautz

Literature:

- Alberts et al.: Molecular Biology of Cells - Garland Science
- Lodish et al.: Molecular Cell Biology - Freeman

Language:

- offered only in German

Notes:

Seminar-dates by appointment, prior registration is mandatory

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- attendance, >90%

MA2600-KP04, MA2600 - Biostatistics 2 (BioStat2)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Master Medical Informatics 2019 (optional subject), Medical Data Science / Artificial Intelligence, 1st or 2nd semester
- Master Biophysics 2019 (optional subject), Elective, 2nd semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Computer Science 2012 (optional subject), specialization field medical informatics, 3rd semester
- Master Computer Science 2012 (optional subject), specialization field bioinformatics, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), advanced curriculum stochastics, 2nd semester
- Bachelor CLS 2010 (compulsory), mathematics, 4th semester

Classes and lectures:

- Biostatistics 2 (lecture, 2 SWS)
- Biostatistics 2 (exercise, 1 SWS)

Workload:

- 45 Hours in-classroom work
- 35 Hours private studies
- 25 Hours programming
- 15 Hours exam preparation

Contents of teaching:

- Knowledge of model assumptions and mathematical foundation of model assumptions for the linear model
- Knowledge of possible sources of errors in the modelling
- Competence in independent analysis of a study using the linear model
- Competence in correctly interpreting study results
- Competence in parameter interpretation and regression diagnostics
- Knowledge of model assumptions and mathematical foundation of the generalized linear model
- Competence in the independent analysis of a simple study with a dichotomous outcome
- Competence in correctly interpreting study results of a study with a dichotomous outcome

Qualification-goals/Competencies:

- The students are able to enumerate and explain the assumptions of the classical linear model.
- The students are able to describe typical applications of the classical linear model.
- The students are able to list the differences between the linear model and the logistic regression model.
- The students are able to describe possible error sources in modelling the linear model.
- The students are able to calculate the estimators (point and interval estimators, residual) in the linear model by hand.
- The students are able to evaluate the graphics for regression diagnostics in the linear model.
- The students are able to interpret the results of studies, where a linear, a logistic or a Cox regression model was applied.
- The students are able to draw and interpret Kaplan-Meier curves.
- The students are able to perform data transformations.

Grading through:

- written exam

Is requisite for:

- Multivariate Statistics (MA4944)
- Interdisciplinary Seminar (MA3300)

Requires:

- Biostatistics 1 (MA1600-KP04, MA1600, MA1600-MML)

Responsible for this module:

- Prof. Dr. rer. biol. hum. Inke König

Teacher:

- [Institute of Medical Biometry and Statistics](#)
- Prof. Dr. rer. biol. hum. Inke König
- [Dr. rer. hum. biol. Markus Scheinhardt](#)

**Literature:**

- Dobson, Annette J & Barnett, Adrian: An Introduction to Generalized Linear Models, 3rd ed. - Chapman & Hall/CRC: Boca Raton (FL), 2008

Language:

- offered only in German

Notes:

Prerequisites for attending the module:

- None (The competences of the required modules are required for this module, but the modules are not a prerequisite for admission.)

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.

MA3200-KP04, MA3200 - Genetic Epidemiology 1 (GenEpi1)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Bachelor CLS 2023 (compulsory), mathematics, 3rd or 5th semester
- Master Medical Informatics 2019 (optional subject), Medical Data Science / Artificial Intelligence, 1st or 2nd semester
- Bachelor CLS 2016 (compulsory), mathematics, 3rd or 5th semester
- Master Medical Informatics 2014 (optional subject), ehealth / infomatics, 1st or 2nd semester
- Master Computer Science 2012 (optional subject), specialization field medical informatics, 3rd semester
- Bachelor CLS 2010 (compulsory), mathematics, 3rd or 5th semester

Classes and lectures:

- Genetic Epidemiology 1 (lecture, 2 SWS)
- Genetic Epidemiology 1 (exercise, 1 SWS)

Workload:

- 60 Hours private studies
- 45 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Fundamentals in molecular genetics: Genetic information, transmission and variation of genetic information, genotyping methods
- Fundamentals in formal genetics: Mendelian laws, segregation patterns, Hardy-Weinberg-equilibrium
- Genetic markers
- Data quality: Errors in the data, methods of error detection
- Association studies: Study designs, tests, estimates, linkage disequilibrium, bias in the data
- Genome-wide association: Study designs, implementation, specific problems

Qualification-goals/Competencies:

- Students are able to describe the generation of genetic data, its error sources and methods of detection.
- They can select and describe the most important approaches for genetic epidemiological association studies on the level of single markers.
- They are able to apply the basic test procedures manually and to interpret the results.
- They are able to describe the statistical evaluation steps in a genome-wide association study and interpret the results.

Grading through:

- Written or oral exam as announced by the examiner

Is requisite for:

- Seminar Genetic Epidemiology (MA5129-KP04, MA5129)
- Genetic Epidemiology 2 (MA4661-KP08, MA4661)

Requires:

- Biostatistics 1 (MA1600-KP04, MA1600, MA1600-MML)

Responsible for this module:

- Prof. Dr. Silke Szymczak

Teacher:

- [Institute of Medical Biometry and Statistics](#)

Notes:

Prerequisites for attending the module:

- None (The competences of the required modules are required for this module, but the modules are not a prerequisite for admission).

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.

MA5030-KP04, MA5030 - Image Registration (Bildregist)
Duration:

1 Semester

Turnus of offer:

every second winter semester

Credit points:

4

Course of study, specific field and term:

- Master MES 2020 (optional subject), mathematics / natural sciences, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), medical image processing, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester
- Master MES 2014 (optional subject), mathematics / natural sciences, 1st semester
- Master Computer Science 2012 (optional subject), advanced curriculum imaging systems, 2nd or 3rd semester
- Master MES 2011 (optional subject), mathematics, 1st or 3rd semester
- Master MES 2011 (advanced curriculum), imaging systems, signal and image processing, 1st or 3rd semester
- Master CLS 2010 (optional subject), mathematics, 1st or 3rd semester
- Master Computer Science 2012 (optional subject), advanced curriculum numerical image processing, 2nd or 3rd semester

Classes and lectures:

- Image Registration (lecture, 2 SWS)
- Image Registration (exercise, 1 SWS)

Workload:

- 65 Hours private studies and exercises
- 45 Hours in-classroom work
- 10 Hours exam preparation

Contents of teaching:

- Introduction and basic principles
- Interpolation
- Deformation models
- Landmark-based registration
- Parametric registration
- Non-parametric registration and regularization strategies

Qualification-goals/Competencies:

- Students know the fundamental concepts in image registration.
- They are able to translate concrete problems into suitable models.
- They have experience with parametric and non-parametric registration problems.
- Interdisciplinary qualifications:
- Students have advanced skills in modeling.
- They can translate theoretical concepts into practical solutions.
- They are experienced in implementation.
- They can think abstractly about practical problems.

Grading through:

- Written or oral exam as announced by the examiner

Requires:

- Linear Algebra and Discrete Structures 2 (MA1500-KP08, MA1500)
- Analysis 2 (MA2500-KP04, MA2500)

Responsible for this module:

- [Prof. Dr. rer. nat. Jan Modersitzki](#)

Teacher:

- [Institute of Mathematics and Image Computing](#)
- [Prof. Dr. Martin Leucker](#)
- [Prof. Dr. rer. nat. Jan Modersitzki](#)

- Rohr: Landmark-Based Image Analysis - Kluwer 2001

Language:

- German and English skills required

Notes:

Prerequisites for attending the module:

- None (The competences of the required modules are required for this module, but the modules are not a prerequisite for admission).

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.

MA5032-KP04, MA5032 - Numerical Methods for Image Computing (NumerikBV)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Master MES 2020 (optional subject), mathematics / natural sciences, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), medical image processing, 1st or 2nd semester
- Master MES 2014 (optional subject), mathematics / natural sciences, Arbitrary semester
- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester
- Master MES 2011 (optional subject), advanced curriculum imaging systems, 2nd or 4th semester
- Master Computer Science 2012 (optional subject), advanced curriculum numerical image processing, 2nd or 3rd semester
- Master CLS 2010 (optional subject), mathematics, 2nd or 4th semester

Classes and lectures:

- Numerical Methods for Image Computing (lecture, 2 SWS)
- Numerical Methods for Image Computing (exercise, 1 SWS)

Workload:

- 65 Hours private studies and exercises
- 45 Hours in-classroom work
- 10 Hours exam preparation

Contents of teaching:

- Imaging process an imaging modalities
- Grids and image representation
- Operators in spatial and frequency domain
- Discrete Fourier Transform/FFT und Anwendungen
- JPEG
- Poisson equation and finite differences discretization
- Splitting methods
- Multigrid methods

Qualification-goals/Competencies:

- The students are familiar with fundamental numerical concepts in image computing.
- They have experience in realizing practical solutions.
- They can implement numerical algorithms on a computer.
- They understand selected methods for solving large linear systems.
- They can implement selected methods for solving large linear systems.
- Interdisciplinary qualifications:
- Students have advanced skills in modeling.
- They can translate theoretical concepts into practical solutions.
- They are experienced in implementation.
- They can think abstractly about practical problems.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- [Prof. Dr. rer. nat. Jan Modersitzki](#)

Teacher:

- [Institute of Mathematics and Image Computing](#)
- [Prof. Dr. rer. nat. Jan Modersitzki](#)
- [Prof. Dr. rer. nat. Jan Lellmann](#)

Language:

- German and English skills required

Notes:

Prerequisites for attending the module:

- None (Familiarity with the topics of the required modules is assumed, but the modules are not a formal prerequisite for attending the course).

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the first examination.

Examination:

- MA5032-L1: Numerical Methods for Image Computing, written examination (90min) or oral examination (30min) as decided by examiner, 100% of final mark

MA5034-KP04, MA5034 - Calculus of Variations and Partial Differential Equations (VariPDE)
Duration:

1 Semester

Turnus of offer:

every second summer semester

Credit points:

4

Course of study, specific field and term:

- Master MES 2020 (optional subject), mathematics / natural sciences, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), medical image processing, 1st or 2nd semester
- Master MES 2014 (optional subject), mathematics / natural sciences, Arbitrary semester
- Bachelor CLS 2010 (optional subject), mathematics, 4th or 6th semester
- Master Medical Informatics 2014 (optional subject), medical image processing, 1st or 2nd semester
- Master MES 2011 (optional subject), mathematics, 2nd or 4th semester
- Master Computer Science 2012 (optional subject), advanced curriculum numerical image processing, 2nd or 3rd semester
- Master MES 2011 (advanced curriculum), imaging systems, signal and image processing, 2nd or 4th semester
- Master CLS 2010 (optional subject), mathematics, 2nd or 4th semester

Classes and lectures:

- Calculus of Variations and Partial Differential Equations (lecture, 2 SWS)
- Calculus of Variations and Partial Differential Equations (exercise, 1 SWS)

Workload:

- 65 Hours private studies and exercises
- 45 Hours in-classroom work
- 10 Hours exam preparation

Contents of teaching:

- Motivation and application examples
- Functional-analytic foundations
- Direct methods in the calculus of variations
- The dual space, weak convergence, Sobolev spaces
- Optimality conditions
- Classification of partial differential equations and typical PDEs
- Fundamental solutions, maximum principle
- Finite elements for elliptical partial differential equations

Qualification-goals/Competencies:

- Students understand variational modeling.
- They are able to formulate basic physical problems in a variational setting.
- They understand the connections between variational methods and partial differential equations.
- They can derive optimality conditions for energy functionals.
- They understand the mathematical theory behind selected variational problems.
- They can implement selected fundamental variational problems.
- They can formulate selected practical problems in the variational setting.
- Interdisciplinary qualifications:
- Students have advanced skills in modeling.
- They can translate theoretical concepts into practical solutions.
- They are experienced in implementation.
- They can think abstractly about practical problems.

Grading through:

- Written or oral exam as announced by the examiner

Responsible for this module:

- [Prof. Dr. rer. nat. Jan Modersitzki](#)

Teacher:

- [Institute of Mathematics and Image Computing](#)

Notes:

Prerequisites for attending the module:

- None (Familiarity with the topics of the required modules is assumed, but the modules are not a formal prerequisite for attending the course).

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the first examination.

Examination:

- MA5034-L1: Calculus of Variations and Partial Differential Equations, written examination (90min) or oral examination (30min) as decided by examiner, 100% of final mark

MZ4373-KP03, MZ4373 - Human Genetics (HumGen)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

3

Course of study, specific field and term:

- Master CLS 2023 (compulsory), MML with specialization in Genetic Statistics, 1st semester
- Master Medical Informatics 2019 (optional subject), bioinformatics, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), bioinformatics, 1st or 2nd semester
- Master CLS 2016 (compulsory), MML with specialization in Genetic Statistics, 1st semester
- Master CLS 2010 (compulsory), computational life science / biostatistics, 1st semester
- Master CLS 2010 (optional subject), mathematics, Arbitrary semester

Classes and lectures:

- Human Genetics for MML (lecture, 2 SWS)

Workload:

- 40 Hours private studies
- 30 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Human genome
- Heredity
- Genetics of mitochondria
- Mutations, detection and nomenclature of sequence variations
- Polymorphisms and SNP
- Linkage analyses
- Repetitive sequences
- Methods: isolation, amplification, screening, and analysis of nucleic acids
- Data bases
- Epigenetics

Qualification-goals/Competencies:

- Students are able to explain basic principles of heredity, the organization of the human genome, the relevance of sequence variations, and their application for medical biometrics.

Grading through:

- written exam

Responsible for this module:

- Prof. Dr. rer. nat. Martin Kircher

Teacher:

- [Institute of Human Genetics](#)
- Prof. Dr. rer. nat. Martin Kircher
- Dr. Andreas Dalski
- MitarbeiterInnen des Instituts

Literature:

- Tom Strachan & Andrew P. Read: Molekulare Humangenetik - 3. Auflage (2005)

Language:

- German or English

Notes:

Prerequisites for attending the module:

- None

Prerequisites for participation in the exam(s):

- None

Module exam(s):

- MZ4373-L1: Human Genetics, written exam, 90 min, 100 % of module grade

MZ4374-KP03, MZ4374 - Molecular Human Genetics (MolHumGen)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

3 (Typ B)

Course of study, specific field and term:

- Master CLS 2023 (compulsory), MML with specialization in Genetic Statistics, 1st semester
- Master Medical Informatics 2019 (optional subject), bioinformatics, 1st or 2nd semester
- Master CLS 2016 (compulsory), MML with specialization in Genetic Statistics, 1st semester
- Master Medical Informatics 2014 (optional subject), bioinformatics, 1st or 2nd semester
- Master CLS 2010 (compulsory), computational life science / biostatistics, 1st semester

Classes and lectures:

- Molecular Human Genetics (practical course, 2 SWS)

Workload:

- 60 Hours private studies
- 30 Hours in-classroom work

Contents of teaching:

- Safety instructions
- Isolation of nucleic acids
- Preparation and separation of nucleic acids
- Amplification of nucleic acids (PCR)
- Restriction of nucleic acids
- Theoretical consideration of pedigrees
- Data base search

Qualification-goals/Competencies:

- Students can perform fundamental molecular genetic experiments, they get basic knowledge in laboratory work

Grading through:

- continuous, successful participation in practical course, >80%

Requires:

- Human Genetics (MZ4373-KP03, MZ4373)

Responsible for this module:

- Prof. Dr. rer. nat. Martin Kircher

Teacher:

- [Institute of Human Genetics](#)
- Prof. Dr. rer. nat. Martin Kircher
- Dr. Andreas Dalski

Literature:

- Lecture notes: -

Language:

- offered only in German

Notes:

Prerequisites for attending the module:

- None (The competences of the required modules are required for this module, but the modules are not a prerequisite for admission.)

Prerequisites for the exam:

- Regular and successful participation in the practical course, at least 80%

Module exam(s):

- MZ4374-L1: Molecular Human Genetics, ungraded practical course, 0 % of module grade, must be passed

PS4620-KP04, PS4620SJ14 - Ethics of Sciences (EthikKP04)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4 (Typ B)

Course of study, specific field and term:

- Bachelor Interdisciplinary Courses for health sciences (optional subject), interdisciplinary competence, Arbitrary semester
- Master Medical Informatics 2019 (optional subject), interdisciplinary competence, 1st or 2nd semester
- Bachelor MES 2014 (optional subject), no specific field, Arbitrary semester
- Master MES 2014 (optional subject), no specific field, 1st or 2nd semester
- Master Medical Informatics 2014 (optional subject), interdisciplinary competence, 1st or 2nd semester
- Master Interdisciplinary Courses (optional subject), Interdisciplinary modules, Arbitrary semester
- Bachelor Interdisciplinary Courses (optional subject), Interdisciplinary modules, Arbitrary semester

Classes and lectures:

- Ethics in the Life Sciences (seminar, 2 SWS)

Workload:

- 65 Hours private studies
- 30 Hours in-classroom work
- 25 Hours work on an individual topic with written and oral presentation

Contents of teaching:

- Societal and ethical implications of research in biomedical sciences and technologies
- Basics of philosophy and sociology of science
- Good scientific practice
- Basics of bioethics: duties of investigators, obligations to colleagues,
- Ethics of human subjects research and animal experiments, environmental ethics. Governance of technology, risk assessment
- Neuroethics
- Ethics of AI and robotics

Qualification-goals/Competencies:

- Students can explain the methodology of the physical sciences and technology and their philosophical basis
- They can recognize ethical dimensions of practice and deciding
- They can identify and assess ethical dimensions of action and decision-making in biotechnology and AI
- They can understand relevant laws in Germany
- They can participate in current discussions in bioethics and research ethics
- They can reflect on ethical dimensions of biomedical sciences

Grading through:

- continuous, successful participation in course

Responsible for this module:

- [Prof. Dr. phil. Christoph Rehmann-Sutter](#)

Teacher:

- [Institute for History of Medicine and Science Studies](#)
- [Prof. Dr. med. Cornelius Borck](#)

Language:

- offered only in English

Notes:

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- Writing an essay and giving a lecture

PS5830-KP04, PS5830 - Start-up and New Business (StartUp)
Duration:

1 Semester

Turnus of offer:

not available anymore

Credit points:

4 (Typ B)

Course of study, specific field and term:

- Master Media Informatics 2014 (optional subject), Interdisciplinary modules, Arbitrary semester
- Bachelor Robotics and Autonomous Systems 2016 (optional subject), interdisciplinary competence, 5th or 6th semester
- Master Medical Informatics 2014 (optional subject), interdisciplinary competence, 1st or 2nd semester
- Master MES 2014 (optional subject), no specific field, 1st or 2nd semester
- Bachelor MES 2014 (optional subject), no specific field, Arbitrary semester
- Master Computer Science 2014 (optional subject), interdisciplinary competence, Arbitrary semester
- Bachelor MES 2011 (optional subject), interdisciplinary competence, Arbitrary semester
- Bachelor Computer Science 2014 (optional subject), central topics of computer science, 5th or 6th semester
- Master CLS 2010 (optional subject), interdisciplinary competence, 2nd or 3rd semester
- Master Computer Science 2012 (optional subject), interdisciplinary competence, 2nd or 3rd semester

Classes and lectures:

- Start-up and New Business (seminar, 1 SWS)
- Start-up and New Business (practical course, 1 SWS)

Workload:

- 45 Hours private studies
- 30 Hours in-classroom work
- 30 Hours written report
- 15 Hours oral presentation (including preparation)

Contents of teaching:

- Entre-/ Intrapreneurship
- Business Modelling
- Technology product, value propositions, and customer benefit
- Target groups, customer segments, and customer relations
- Sales channels, marketing and sources of income
- Key resources / activities / partners
- costs and financing, including funding programs
- special subjects: quality, acceptance for trading, legal form of organization, a.o.

Qualification-goals/Competencies:

- The students have gained basic insights in the field of Start-up, new product development and new business development.
- They have acquired a sound knowledge of business modelling and planning.
- They are able to develop a business plan based on a particular project.
- They are able to assess the chances and risks of a start-up and new product / new business development.

Grading through:

- contributions to the discussion

Responsible for this module:

- [Prof. Dr. Martin Leucker](#)

Teacher:

- [Institute of Software Technology and Programming Languages](#)
- Dr. Raimund Mildner

Literature:

- Aktuelle Forschungsartikel werden in der Veranstaltung bekanntgegeben.:

Language:

- offered only in German

RO5600-KP06 - Social Robotics (SocRob)		
Duration: 1 Semester	Turnus of offer: not available anymore	Credit points: 6
Course of study, specific field and term: <ul style="list-style-type: none"> • Master Biophysics 2019 (optional subject), Elective, 1st or 2nd semester • Master Medical Informatics 2014 (optional subject), Robotics and Autonomous Systems, 1st or 2nd semester 		
Classes and lectures: <ul style="list-style-type: none"> • Social Robotics (lecture, 2 SWS) • Social Robotics (exercise, 2 SWS) 	Workload: <ul style="list-style-type: none"> • 100 Hours private studies • 60 Hours in-classroom work • 20 Hours exam preparation 	
Contents of teaching: <ul style="list-style-type: none"> • • • • 		
Qualification-goals/Competencies: <ul style="list-style-type: none"> • • • 		
Grading through: <ul style="list-style-type: none"> • Written or oral exam as announced by the examiner

CS5310-KP12 - Projektpraktikum Medizinische Informatik 1 (PPMI1)
Duration:

1 Semester

Turnus of offer:

each semester

Credit points:

12 (Typ B)

Course of study, specific field and term:

- Master Medical Informatics 2019 (compulsory), medical computer science, 3rd semester
- Master Medical Informatics 2014 (compulsory), medical computer science, 3rd semester

Classes and lectures:

- Projektpraktikum I (block practical course, 12 SWS)

Workload:

- 280 Hours work on project
- 60 Hours private studies and exercises
- 20 Hours written report

Contents of teaching:

- Project task in a concrete application scenario
- Documentation, presentation, motivation in heterogeneous environments
- The project task is always embedded in heterogeneous and living environments with considerable demands on communication about integration, planning, interfaces, resources, etc.

Qualification-goals/Competencies:

- The students have a deep understanding of selected aspects of medical informatics.
- They are able to implement selected aspects of medical informatics.
- They are able to document and present project results.
- They are capable of presenting to particular audiences or under time restrictions (eg elevator pitch etc.).
- They have project experience in concrete application scenarios.
- They have basic skills in the field of project management.

Grading through:

- documentation

Responsible for this module:

- Studiengangsleitung Medizinische Informatik

Teacher:

- All Institutes and Clinics of the Universität zu Lübeck
- Scientific facilities at the Universität zu Lübeck or abroad with mandatory supervision by an university lecturer
- [Institute for Neuro- and Bioinformatics](#)
- [Institute of Medical Informatics](#)

Language:

- German and English skills required

Notes:

Admission requirements for taking the module:

- Registration of the internships with the chair of the examination board is obligatory for later recognition. The corresponding forms can be found at <https://www.uni-luebeck.de/index.php?id=5182>.

Admission requirements for participation in module examination(s):

- Regular and successful participation in the internship

Module Exam(s):

- CS5310-L1: Project Practical Medical Informatics 1, ungraded practical, must be passed.

The internships can be completed both at the University of Lübeck and at external universities, research institutions and medical informatics companies in Germany and abroad. It is recommended to apply for a place abroad. One of the two block internships can be completed in a medical institute or a clinic. Both project internships can be combined to one large internship.

CS5320-KP12 - Projektpraktikum Medizinische Informatik 2 (PPMI2)
Duration:

1 Semester

Turnus of offer:

each semester

Credit points:

12 (Typ B)

Course of study, specific field and term:

- Master Medical Informatics 2019 (compulsory), medical computer science, 3rd semester
- Master Medical Informatics 2014 (compulsory), medical computer science, 3rd semester

Classes and lectures:

- Projektpraktikum Medizinische Informatik 2 (block practical course, 12 SWS)

Workload:

- 280 Hours work on project
- 60 Hours private studies and exercises
- 20 Hours written report

Contents of teaching:

- Project task in a concrete application scenario
- Documentation, presentation, motivation in heterogeneous environments
- The project task is always embedded in heterogeneous and living environments with considerable demands on communication about integration, planning, interfaces, resources, etc.

PS5000-KP06, PS5000 - Student Conference (ST)		
Duration: 1 Semester	Turnus of offer: each winter semester	Credit points: 6 (Typ B)
Course of study, specific field and term:		
<ul style="list-style-type: none"> • Master Psychology - Cognitive Systems 2022 (compulsory), psychology, 3rd semester • Master Biophysics 2023 (compulsory), biophysics, 3rd semester • Master Auditory Technology 2022 (compulsory), Auditory Technology, 3rd semester • Master MES 2020 (compulsory), interdisciplinary competence, 3rd semester • Master Medical Informatics 2019 (compulsory), interdisciplinary competence, 3rd semester • Master Biophysics 2019 (compulsory), biophysics, 3rd semester • Master Auditory Technology 2017 (compulsory), Auditory Technology, 3rd semester • Master Interdisciplinary Courses (optional subject), Interdisciplinary modules, Arbitrary semester • Master Robotics and Autonomous Systems 2019 (compulsory), Compulsory courses, 3rd semester • Master Medical Informatics 2014 (compulsory), interdisciplinary competence, 3rd semester • Master MES 2014 (compulsory), interdisciplinary competence, 3rd semester 		
Classes and lectures:		Workload:
<ul style="list-style-type: none"> • Student Conference (seminar, 4 SWS) 		<ul style="list-style-type: none"> • 155 Hours work on an individual topic (research and development) and written elaboration • 25 Hours in-classroom work
Contents of teaching:		
<ul style="list-style-type: none"> • Preparation of a scientific publication in English based on the results of at least one of the project internships • Preparation of a scientific poster in English based on the results of at least one of the project internships • Presentation of a scientific poster in German or English, based on the results of at least one of the project internships • Talk in English based on the results of at least one of the project internships • Active participation in scientific discussions • Active participation in a scientific peer-review process 		
Qualification-goals/Competencies:		
<ul style="list-style-type: none"> • Students have experience in a comprehensive review of a scientific topic • They are able to get an extensive overview of a complex scientific area • They have the experience and ability to take an active part in scientific discussions • They are able to defend one's work successfully in a scientific discourse • They have knowledge of the peer-review process of publications • They are able to constructively criticize in a blind peer-review process • 		
Grading through:		
<ul style="list-style-type: none"> • continuous, successful participation in course 		
Responsible for this module:		
<ul style="list-style-type: none"> • Prof. Dr. rer. nat. habil. Heinz Handels • Prof. Dr. rer. nat. Thorsten Buzug 		
Teacher:		
<ul style="list-style-type: none"> • All Institutes and Clinics of the Universität zu Lübeck 		
Literature:		
<ul style="list-style-type: none"> • is selected individually: 		
Language:		
<ul style="list-style-type: none"> • offered only in English 		
Notes:		

Admission requirements for the module:

- Successful completion of at least one project internship.
- Registration for at least one project internship is required.

Admission requirements for the examination:

- Regular and successful participation

Since the content of the presentation should reflect the results of at least one of the project internships, the students will be supervised by the same university lecturer that supervised the internships. Internships can be carried out at home or abroad in medical technology companies, audiology companies and IT companies in the healthcare industry as well as hospitals and scientific institutions. The supervision by an university lecturer is obligatory.

Students for whom this course is a compulsory module have priority.

(The share of the Institute of Medical Technology in all is 75%)

(Share of medical informatics in all is 25%)

CS5991-KP30, CS5991 - Master Thesis Medical Computer Science (MScMI)

Duration:	Turnus of offer:	Credit points:
1 Semester	each semester	30
Course of study, specific field and term:		
<ul style="list-style-type: none"> • Master Medical Informatics 2019 (compulsory), medical computer science, 4th semester • Master Medical Informatics 2014 (compulsory), medical computer science, 4th semester 		
Classes and lectures:		Workload:
<ul style="list-style-type: none"> • Kolloquium (supervised self studies, 1 SWS) • Colloquium (presentation (incl. preparation), 1 SWS) 		<ul style="list-style-type: none"> • 870 Hours research for and write up of a thesis • 30 Hours oral presentation and discussion (including preparation)
Contents of teaching:		
<ul style="list-style-type: none"> • Independent scientific work on a complex task of medical informatics and its applications • Scientific presentation about the problem and the solution developed 		
Qualification-goals/Competencies:		
<ul style="list-style-type: none"> • Students are able to solve a complex scientific problem by the means of their discipline. • They have the expertise to plan, organize and carry out a project work. • They can present complex information in written and oral form. • They are experts for a roughly defined topic.

CS4405 T - Module part: NeuroInformatics (NeuroInfA)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

4

Course of study, specific field and term:

- Master Biophysics 2023 (module part), advanced curriculum, 2nd semester
- Master Computer Science 2019 (module part), Module part, Arbitrary semester
- Master MES 2020 (module part), computer science / electrical engineering, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2019 (module part), Module part, Arbitrary semester
- Master Biophysics 2019 (module part), advanced curriculum, 2nd semester
- Master IT-Security 2019 (module part), Module part, 1st or 2nd semester
- Master Medical Informatics 2014 (module part), Module part, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (module part), Module part, Arbitrary semester
- Master MES 2014 (module part), computer science / electrical engineering, 2nd semester
- Master Computer Science 2014 (module part), Module part, Arbitrary semester

Classes and lectures:

- NeuroInformatics (lecture, 2 SWS)
- NeuroInformatics (exercise, 1 SWS)

Workload:

- 55 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- The human brain and abstract neuron models
- Learning with a single neuron:* Perceptrons* Max-Margin Classification* LDA and logistic Regression
- Network architectures:* Hopfield-Networks* Multilayer-Perceptrons* Deep Learning
- Unsupervised Learning:* k-means, Neural Gas and SOMs* PCA & ICA* Sparse Coding

Qualification-goals/Competencies:

- The students are able to understand the principle function of a single neuron and the brain as a whole.
- They know abstract neuronal models and they are able to name practical applications for the different variants.
- They are able to derive a learning rule from a given error function.
- They are able to apply (and implement) the proposed learning rules and approaches to solve unknown practical problems.

Grading through:

- exam type depends on main module

Responsible for this module:

- Siehe Hauptmodul

Teacher:

- [Institute for Neuro- and Bioinformatics](#)
- [Prof. Dr. rer. nat. Thomas Martinetz](#)

Literature:

- S. Haykin: Neural Networks - London: Prentice Hall, 1999

CS4440 T - Module part: Molecular Bioinformatics (MolBioInf)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Master Biophysics 2023 (module part), advanced curriculum, Arbitrary semester
- Master Biophysics 2019 (module part), advanced curriculum, Arbitrary semester
- Master Computer Science 2019 (module part), Module part, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2019 (module part), Module part, Arbitrary semester
- Master MLS 2009 (Module part of a compulsory module), interdisciplinary competence, 1st semester
- Master Medical Informatics 2014 (module part), Module part, Arbitrary semester
- Master Computer Science 2014 (module part), Module part, Arbitrary semester

Classes and lectures:

- Molecular Bioinformatics (lecture, 2 SWS)
- Molecular Bioinformatics (exercise, 1 SWS)

Workload:

- 45 Hours private studies
- 45 Hours in-classroom work
- 20 Hours exam preparation

Contents of teaching:

- Methods for fast genome comparison
- Analysis of data describing gene expression profiles and sequence variation
- Advanced usage of biological databases (for sequences, motifs, structures, gene regulation and interactions)

Qualification-goals/Competencies:

- The students can apply indexing based software to Next Generation sequence data.
- They can use and design databases for molecularbiological research.
- They are able to detect statistically significant changes in Microarray data.

Grading through:

- exam type depends on main module

Requires:

- Introduction to Bioinformatics (CS1400-KP04, CS1400)

Responsible for this module:

- Siehe Hauptmodul

Teacher:

Language:

- offered only in German

**Notes:**

Prerequisites for attending the module:

- None (The competences of the required modules are required for this module, but the modules are not a prerequisite for admission.)

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.

This modul is for Master MLS the Modulpart B of Modul LS4060 with 5 credit points.

MA4450 T-INF - Module part: Modeling Biological Systems (MoBSa)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

4

Course of study, specific field and term:

- Master Computer Science 2019 (module part), Module part, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2020 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2019 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2014 (module part), Module part, Arbitrary semester
- Master Computer Science 2014 (module part), Module part, Arbitrary semester

Classes and lectures:

- Modeling Biological Systems (lecture, 2 SWS)
- Modeling Biological Systems (exercise, 1 SWS)

Workload:

- 65 Hours private studies and exercises
- 45 Hours in-classroom work
- 10 Hours exam preparation

Contents of teaching:

- Elementary time-discrete deterministic models
- Structured time-discrete population dynamics
- Generating functions, Galton-Watson-processes
- Modeling of data and data analysis

Qualification-goals/Competencies:

- Students have knowledge of elementary time-discrete models for modeling biological processes
- They develop skills in connecting ideas from different fields of mathematics
- They have competencies in data analysis and modelling
- They develop competencies in interdisciplinary work

Grading through:

- Exercises
- exam type depends on main module

Requires:

- Stochastics 1 (MA2510-KP04, MA2510)
- Analysis 2 (MA2500-KP04, MA2500)
- Linear Algebra and Discrete Structures 2 (MA1500-KP08, MA1500)

- E. Seneta: *Non-negative Matrices and Markov Chains* - New York: Springer 1981

Language:

- offered only in German

Notes:

Is part of CS4441.

The lecture is identical to that in module MA4450-MML.

Prerequisites for attending the module:

- None (The competences of the required modules are required for this module, but the modules are not a prerequisite for admission.)

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.

ME4030 T-INF - Module part: Inverse Problems in Imaging (InverPalnf)
Duration:

1 Semester

Turnus of offer:

each summer semester

Credit points:

3

Course of study, specific field and term:

- Master Entrepreneurship in Digital Technologies 2020 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2014 (module part), Module part, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (module part), Module part, Arbitrary semester
- Master Computer Science 2014 (module part), Module part, Arbitrary semester

Classes and lectures:

- Inverse Problems in Imaging (lecture, 2 SWS)

Workload:

- 45 Hours private studies
- 30 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Introduction to inverse and ill-posed problems on the basis of selected examples (including seismology, impedance tomography, heat conduction, computed tomography, acoustic)
- Concept of ill-posedness of the inverse problem (Hadamard)
- Singular value decomposition and generalized inverse
- Regularization methods (eg Tikhonov, Phillips, Ivanov)
- Deconvolution
- Image restoration (deblurring, defocusing)
- Statistical methods (Bayes, maximum likelihood)
- Computed Tomography, Magnetic Particle Imaging

Qualification-goals/Competencies:

- Students are able to explain the concept of ill-posedness of the inverse problem and distinguish given inverse problems regarding good or bad posedness.
- They are able to formulate inverse problems of mathematical imaging and solve (approximate) with suitable numerical methods.
- They can assess the condition of a problem and the stability of a method.
- They master different regularization methods and are able to apply them to practical problems.
- They know methods to determine a suitable regularization.
- They can use methods of image reconstruction and restoration on real measurement data.

Grading through:

- exam type depends on main module

Responsible for this module:

- Andreas Rieder: Keine Probleme mit inversen Problemen - Vieweg, Wiesbaden, 2003
- Buzug: Computed Tomography - Springer, Berlin, 2008

Language:

- offered only in German

Notes:

Prerequisites for attending the module:

- None

Prerequisites for the exam:

- Preliminary examinations can be determined at the beginning of the semester. If preliminary work has been defined, it must have been completed and positively assessed before the initial examination.

ME4411 T - Module part: Computed Tomography (CT)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

3

Course of study, specific field and term:

- Master CLS 2023 (Module part of a compulsory module), MML with specialization in Image Processing, 1st semester
- Master MES 2020 (Module part of a compulsory module), medical engineering science, 1st semester
- Master Entrepreneurship in Digital Technologies 2020 (module part), Module part, Arbitrary semester
- Master CLS 2016 (Module part of a compulsory module), MML with specialization in Image Processing, 1st semester
- Master Computer Science 2014 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2014 (module part), Module part, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (module part), Module part, Arbitrary semester
- Master MES 2014 (Module part of a compulsory module), medical engineering science, 1st semester

Classes and lectures:

- Computed Tomography (lecture, 2 SWS)

Workload:

- 40 Hours private studies
- 35 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Signal processing (recapitulation of fundamental principles in signal processing)
- Mathematical methods in image reconstruction and signal processing
- X-Ray (fundamental principles, quantum statistics)
- Computed Tomography * devices, * current and past technology, * signal processing, * Fourier-based 2D and 3D image reconstruction, * algebraic and statistical image reconstruction, * image artifacts, * technical and clinical applications, * dose.

Qualification-goals/Competencies:

- Students are able to create an overview of the signal chain for medical imaging.
- They are able to explain the mathematical background for the reconstruction of CT images.
- They are able to explain the basics for the creation of X-ray.
- They are able to list all generations of CT devices and explain differences and advances.
- They are able to apply the Fourier transform.
- They are able to explain the mathematical basics for the two-dimensional image reconstruction.
- They are able to create and apply an algebraic approach for the reconstruction of CT images.
- They are able to create and apply an statistical approach for the reconstruction of CT images.
- They are able to outline the differences between two dimensional and three dimensional image reconstruction.
- They are able to transfer methods from two dimensional to three dimensional image reconstruction.

Grading through:

- Oral examination

Responsible for this module:

- Siehe Hauptmodul

Teacher:

- [Institute of Medical Engineering](#)
- [Prof. Dr. rer. nat. Thorsten Buzug](#)

Literature:

- T. M. Buzug: Computed Tomography, From Photon Statistics to Modern Cone Beam CT - Springer-Verlag, Berlin/Heidelberg, 2008
- T. M. Buzug: Einführung in die Computertomographie, Mathematisch-physikalische Grundlagen der Bildrekonstruktion - Springer-Verlag, Berlin/Heidelberg, 2004

Language:

- German and English skills required

Notes:

Prerequisites for attending the module:

- None

Prerequisites for participation in the exam(s):

- None

Module exam(s):

- ME4411-L1: Computed Tomography, oral exam, 100 % of module grade

(Is module part of CS4512, ME4410-KP12, ME4415-KP06)

ME4412 T - Module part: Magnetic Resonance Imaging (MRT)
Duration:

1 Semester

Turnus of offer:

each winter semester

Credit points:

3

Course of study, specific field and term:

- Master CLS 2023 (Module part of a compulsory module), MML with specialization in Image Processing, 1st semester
- Master MES 2020 (Module part of a compulsory module), medical engineering science, 1st semester
- Master Entrepreneurship in Digital Technologies 2020 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2019 (module part), Module part, Arbitrary semester
- Master CLS 2016 (Module part of a compulsory module), MML with specialization in Image Processing, 1st semester
- Master Computer Science 2014 (module part), Module part, Arbitrary semester
- Master Medical Informatics 2014 (module part), Module part, Arbitrary semester
- Master Entrepreneurship in Digital Technologies 2014 (module part), Module part, Arbitrary semester
- Master MES 2014 (Module part of a compulsory module), medical engineering science, 1st semester

Classes and lectures:

- Magnetic Resonance Imaging (lecture, 2 SWS)

Workload:

- 40 Hours private studies
- 30 Hours in-classroom work
- 15 Hours exam preparation

Contents of teaching:

- Physical fundamentals of magnetic resonance imaging: nuclear magnetic resonance, relaxation mechanisms, principles of position encoding/principles of spatial encoding, relaxation)
- Construction of basic imaging sequences, weighting
- Concept of k-space
- Coherence pathways
- Hardware components of a clinical MR system
- Possible sources of hazard for patients
- Influence of measurement parameters on signal-to-noise ratio
- Causes of image artefacts

Qualification-goals/Competencies:

- The students can explain the physical principles of NMR and MRI.
- They can explain the idea behind important imaging sequences, using a pulse sequence diagram.
- They can recognise the causes of important image artefacts.
- They can list advantages and disadvantages of MRT, compared to other imaging techniques.
- They can list possible sources of hazard for patients, explain their causes and point out strategies for avoiding these.

Grading through:

- Oral examination
